

Hunter Small Cap Value Fund

A Series of Two Roads Shared Trust

Class I
HSCVX

STATEMENT OF ADDITIONAL INFORMATION

November 30, 2023

This Statement of Additional Information (“SAI”) is not a prospectus and should be read in conjunction with the prospectus of the Hunter Small Cap Value Fund (the “Fund”) dated November 30, 2023 (the “Prospectus”). The Prospectus is hereby incorporated by reference, which means it is legally part of this document. You can obtain copies of the Prospectus, annual or semi-annual reports of the Fund, when available, without charge by contacting the Fund’s Distributor, Northern Lights Distributors, LLC, 4221 North 203rd Street, Ste. 100, Elkhorn, Nebraska 68022-3474 or by calling 1-833-835-1171. You may also obtain the Prospectus, annual or semi-annual reports, when available, by visiting the Fund’s website at www.hunterfunds.com.

THE FUND

The Fund is a series of Two Roads Shared Trust, a Delaware statutory trust organized on June 8, 2012 (the “Trust”). The Trust is registered as an open-end management investment company currently consisting of 30 separate, active portfolios. The Trust is governed by its Board of Trustees (the “Board” or “Trustees”). The Fund may issue an unlimited number of shares of beneficial interest. All shares of the Fund have equal rights and privileges. Each share of the Fund is entitled to one vote on all matters as to which shares are entitled to vote. In addition, each share of the Fund is entitled to participate equally with other shares (i) in dividends and distributions declared by the Fund and (ii) on liquidation to its proportionate share of the assets remaining after satisfaction of outstanding liabilities. Shares of the Fund are fully paid, non-assessable and fully transferable when issued and have no pre-emptive, conversion or exchange rights. Fractional shares have proportionately the same rights, including voting rights, as are provided for a full share.

The Fund is a “diversified” series of the Trust, meaning the Fund is subject to the diversification requirements of the Investment Company Act of 1940 (the “1940 Act”), which generally limit investments, as to 75% of a fund’s total assets, to no more than 5% in securities in a single issuer and 10% of an issuer’s voting securities.

The Fund consists of Class I shares. The Fund’s investment objective, restrictions and policies are more fully described herein and in the Fund’s Prospectus. The Board may launch other series and offer shares of a new fund under the Trust at any time.

Under the Trust’s Agreement and Declaration of Trust, each Trustee will continue in office until the termination of the Trust or his/her earlier death, incapacity, resignation or removal. Shareholders can remove a Trustee to the extent provided by the 1940 Act and the rules and regulations promulgated thereunder. Vacancies may be filled by a majority of the remaining Trustees, except insofar as the 1940 Act may require the election by shareholders. As a result, normally no annual or regular meetings of shareholders will be held unless matters arise requiring a vote of shareholders under the Agreement and Declaration of Trust or the 1940 Act.

TYPES OF INVESTMENTS, STRATEGIES AND RELATED RISKS

The investment objective of the Fund and a description of its principal investment strategies are set forth under “Additional Information About Principal Investment Strategies and Related Risks” in the Prospectus. The Fund’s investment objective is not a fundamental policy and may be changed without the approval of a majority of the outstanding voting securities of the Trust (as such term is defined in the 1940 Act).

In accordance with Rule 35d-1 under the 1940 Act, the Fund has adopted a non-fundamental investment policy that it will, under normal conditions, invest at least 80% of its net assets (including borrowings for investment purposes) in a diversified portfolio consisting primarily of equity securities, such as common stocks, of issuers with small market capitalizations. The 80% investment policy of the Fund may be changed at any time by the Board of Trustees. Shareholders will be given written notice at least 60 days prior to any change by the Fund of its 80% investment policy.

The following pages contain more detailed information about the types of instruments in which the Fund may invest, strategies the Adviser may employ in pursuit of the Fund’s investment objective and a summary of related risks.

Adviser Risks

If the Adviser to the Fund manages more money in the future, including money raised in this offering, such additional funds could affect its performance or trading strategies. Also, the Adviser manages other accounts. This increases the competition for the same trades which the Fund make. There is no assurance that the Fund’s trading will generate the same results as any other accounts managed by the Adviser.

Borrowing

While the Fund does not anticipate doing so, other than for cash management, the Fund may borrow money for investment purposes. Borrowing for investment purposes is one form of leverage. Leveraging investments, by purchasing securities with borrowed money, is a speculative technique that increases investment risk, but also increases investment opportunity. Because substantially all of the Fund’s assets will fluctuate in value, whereas the interest obligations on borrowings may be fixed, the NAV per share of the Fund will increase more when the Fund’s portfolio assets increase in value and decrease more when the Fund’s portfolio assets decrease in value than would otherwise be the case. Moreover, interest costs on borrowings may fluctuate with changing market rates of interest and may partially offset or exceed the returns on the borrowed funds. Under adverse conditions, the Fund might have to sell portfolio securities to meet interest or principal payments at a time when investment considerations would not favor such sales. The Fund may use leverage during periods when the Adviser believes that the Fund’s investment objective would be furthered.

The Fund may also borrow money to facilitate management of the Fund's portfolio by enabling the Fund to meet redemption requests when the liquidation of portfolio instruments would be inconvenient or disadvantageous. Such borrowing is not for investment purposes and will be repaid by the Fund promptly. As required by the 1940 Act, the Fund must maintain continuous asset coverage (total assets, including assets acquired with borrowed funds, less liabilities exclusive of borrowings) of 300% of all amounts borrowed. If, at any time, the value of the Fund's assets should fail to meet this 300% coverage test, the Fund, within three days (not including Sundays and holidays), will reduce the amount of the Fund's borrowings to the extent necessary to meet this 300% coverage requirement. Maintenance of this percentage limitation may result in the sale of portfolio securities at a time when investment considerations otherwise indicate that it would be disadvantageous to do so.

In addition to the foregoing, the Fund is authorized to borrow money as a temporary measure for extraordinary or emergency purposes in amounts not in excess of 5% of the value of the Fund's total assets. Borrowings for extraordinary or emergency purposes are not subject to the foregoing 300% asset coverage requirement.

Certificates of Deposit and Bankers' Acceptances

The Fund may invest in certificates of deposit and bankers' acceptances, which are considered to be short-term money market instruments.

Certificates of deposit are receipts issued by a depository institution in exchange for the deposit of funds. The issuer agrees to pay the amount deposited plus interest to the bearer of the receipt on the date specified on the certificate. The certificate usually can be traded in the secondary market prior to maturity. Bankers' acceptances typically arise from short-term credit arrangements designed to enable businesses to obtain funds to finance commercial transactions. Generally, an acceptance is a time draft drawn on a bank by an exporter or an importer to obtain a stated amount of funds to pay for specific merchandise. The draft is then "accepted" by a bank that, in effect, unconditionally guarantees to pay the face value of the instrument on its maturity date. The acceptance may then be held by the accepting bank as an earning asset or it may be sold in the secondary market at the going rate of discount for a specific maturity. Although maturities for acceptances can be as long as 270 days, most acceptances have maturities of six months or less.

Commercial Paper

The Fund may purchase commercial paper. Commercial paper consists of short-term (usually from 1 to 270 days) unsecured promissory notes issued by corporations in order to finance their current operations. See Appendix B for more information on ratings assigned to commercial paper. It may be secured by letters of credit, a surety bond or other forms of collateral. Commercial paper is usually repaid at maturity by the issuer from the proceeds of the issuance of new commercial paper. As a result, investment in commercial paper is subject to the risk the issuer cannot issue enough new commercial paper to satisfy its outstanding commercial paper, also known as rollover risk. Commercial paper may become illiquid or may suffer from reduced liquidity in certain circumstances. Like all fixed income securities, commercial paper prices are susceptible to fluctuations in interest rates. If interest rates rise, commercial paper prices will decline. The short-term nature of a commercial paper investment makes it less susceptible to interest rate risk than many other fixed income securities because interest rate risk typically increases as maturity lengths increase. Commercial paper tends to yield smaller returns than longer-term corporate debt because securities with shorter maturities typically have lower effective yields than those with longer maturities. As with all fixed income securities, there is a chance that the issuer will default on its commercial paper obligation.

Corporate Debt Securities

Corporate debt securities are typically fixed-income securities issued by businesses to finance their operations, but may also include bank loans to companies. Notes, bonds, debentures and commercial paper are the most common types of corporate debt securities. The primary differences between the different types of corporate debt securities are their maturities and secured or un-secured status. Commercial paper has the shortest term and is usually unsecured. The broad category of corporate debt securities includes debt issued by domestic or foreign companies of all kinds, including those with small-, mid- and large-capitalizations. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest.

Because of the wide range of types, and maturities, of corporate debt securities, as well as the range of creditworthiness of its issuers, corporate debt securities have widely varying potentials for return and risk profiles. For example, commercial paper issued by a large established domestic corporation that is rated investment-grade may have a modest return on principal, but carries relatively limited risk. On the other hand, a long-term corporate note issued by a small foreign corporation from an emerging market country that has not been rated may have the potential for relatively large returns on principal, but carries a relatively high degree of risk.

Corporate debt securities carry both credit risk and interest rate risk. Credit risk is the risk that the Fund could lose money if the issuer of a corporate debt security is unable to pay interest or repay principal when it is due. Some corporate debt securities that are rated below investment-grade are generally considered speculative because they present a greater risk of loss, including default, than higher quality debt securities. The credit risk of a particular issuer's debt security may vary based on its priority for repayment. For example, higher ranking (senior) debt securities have a higher priority than lower ranking (subordinated) securities. This means that the issuer might not

make payments on subordinated securities while continuing to make payments on senior securities. In addition, in the event of bankruptcy, holders of higher-ranking senior securities may receive amounts otherwise payable to the holders of more junior securities. Interest rate risk is the risk that the value of certain corporate debt securities will tend to fall when interest rates rise. In general, corporate debt securities with longer duration tend to fall more in value when interest rates rise than corporate debt securities with shorter duration.

Cyber Security Risk

The Fund and its service providers may be prone to operational and information security risks resulting from breaches in cyber security. A breach in cyber security refers to both intentional and unintentional events that may cause the Fund to lose proprietary information, suffer data corruption, or lose operational capacity. Breaches in cyber security include, among other behaviors, stealing or corrupting data maintained online or digitally, denial of service attacks on websites, the unauthorized release of confidential information or various other forms of cyber-attacks. Cyber security breaches affecting the Fund or its Adviser, custodian, transfer agent, intermediaries and other third-party service providers may adversely impact the Fund. For instance, cyber security breaches may interfere with the processing of shareholders transactions, impact the Fund's ability to calculate its NAVs, cause the release of private shareholder information or confidential business information, impede trading, subject the Fund to regulatory fines or financial losses and/or cause reputational damage. The Fund may also incur additional costs for cyber security risk management purposes. Similar types of cyber security risks are also present for issuers of securities in which the Fund may invest, which could result in material adverse consequences for such issuers and may cause the Fund's investment in such companies to lose value.

Depository Receipts

Sponsored and unsponsored American Depositary Receipts ("ADRs") are receipts issued by an American bank or trust company evidencing ownership of underlying securities issued by a foreign (non-U.S.) issuer. ADRs, in registered form, are designed for use in U.S. securities markets. In addition to the investment risks associated with the underlying issuer, ADRs expose the Fund to additional risks associated with the non-uniform terms that apply to ADR programs, credit exposure to the depository bank and to the sponsors and other parties with whom the depository bank establishes the program, currency risk and liquidity risk. Unsponsored ADRs may be created without the participation of the foreign (non-U.S.) issuer. Holders of these ADRs generally bear all the costs of the ADR facility, whereas foreign (non-U.S.) issuers typically bear certain costs in a sponsored ADR. The bank or trust company depository of an unsponsored ADR may be under no obligation to distribute shareholder communications received from the foreign (non-U.S.) issuer or to pass through voting rights. Many of the risks described below regarding foreign securities apply to investments in ADRs.

Global Depositary Receipts ("GDRs") are receipts issued by a non-U.S. financial institutions evidencing ownership of underlying foreign or U.S. securities and usually are denominated in foreign currencies. GDRs may not be denominated in the same currency as the securities they represent. Generally, GDRs are designed for use in the foreign securities markets.

Derivative Instruments

The Fund may purchase and write call and put options on securities, securities indices and foreign (non-U.S.) currencies, and enter into futures contracts and use options on futures contracts as further described below. The Fund may also enter into swap agreements with respect to foreign (non-U.S.) currencies, interest rates and securities indices. The Fund may use these techniques to hedge against changes in interest rates, foreign (non-U.S.) currency exchange rates or securities prices or to attempt to achieve investment returns as part of its overall investment strategies. The Fund may also purchase and sell options relating to foreign (non-U.S.) currencies for purposes of increasing exposure to a foreign (non-U.S.) currency or to shift exposure to foreign (non-U.S.) currency fluctuations from one country to another.

The Fund considers derivative instruments to consist of securities or other instruments whose value is derived from or related to the value of some other instrument or asset, and not to include those securities whose payment of principal and/or interest depends upon cash flows from underlying assets, such as mortgage-related or asset-backed securities. The value of some derivative instruments in which the Fund invests may be particularly sensitive to changes in prevailing interest rates, and, like the other investments of the Fund, the ability of the Fund to successfully utilize these instruments may depend in part upon the ability of the Adviser to correctly forecast interest rates and other economic factors. If the Fund's Adviser incorrectly forecasts such factors and has taken positions in derivative instruments contrary to prevailing market trends, the Fund could be exposed to the risk of loss. In addition, while the use of derivatives for hedging purposes can reduce losses, it can also reduce or eliminate gains, and hedges are sometimes subject to imperfect matching between the derivative and security it is hedging, which means that a hedge might not be effective. The Fund may not employ any of the strategies described above, and no assurance can be given that any strategy used will succeed. A decision as to whether, when and how to utilize derivative instruments involves skill and judgment, and even a well-conceived derivatives strategy may be unsuccessful. The use of derivative instruments involves brokerage fees and/or other transaction costs.

Investment in futures-related and commodity-linked derivatives may subject the Fund to additional risks, and in particular may subject the Fund to greater volatility than investments in traditional securities. The value of futures-related and commodity-linked derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs, and international

economic, political and regulatory developments. In order to qualify for the special tax treatment available to regulated investment companies under the Internal Revenue Code of 1986, as amended (the “Internal Revenue Code”), the Fund must, among other requirements, derive at least 90% of its gross income each taxable year from certain specified types of investments. It is currently unclear which types of commodities-linked derivatives fall within these specified investment types. As a result, if the Fund’s investment in commodities-linked derivatives were to exceed a certain threshold, the Fund could fail to qualify for the special tax treatment available to regulated investment companies under the Internal Revenue Code.

Regulatory Risks of Derivative Use

Rule 18f-4 under the 1940 Act permits the Fund to enter into Derivatives Transactions (as defined below) and certain other transactions notwithstanding the restrictions on the issuance of “senior securities” under Section 18 of the 1940 Act. Section 18 of the 1940 Act, among other things, prohibits open-end funds, including the Fund, from issuing or selling any “senior security,” other than borrowing from a bank (subject to a requirement to maintain 300% “asset coverage”).

Under Rule 18f-4, “Derivatives Transactions” include the following: (1) any swap, security-based swap (including a contract for differences), futures contract, forward contract, option (excluding purchased options), any combination of the foregoing, or any similar instrument, under which the Fund is or may be required to make any payment or delivery of cash or other assets during the life of the instrument or at maturity or early termination, whether as margin or settlement payment or otherwise; (2) any short sale borrowing; (3) reverse repurchase agreements and similar financing transactions (e.g., recourse and non-recourse tender option bonds, and borrowed bonds), if the Fund elects to treat these transactions as Derivatives Transactions under Rule 18f-4; and (4) when-issued or forward-settling securities (e.g., firm and standby commitments, including to-be-announced (“TBA”) commitments, and dollar rolls) and non-standard settlement cycle securities, unless the Fund intends to physically settle the transaction and the transaction will settle within 35 days of its trade date (the “Delayed-Settlement Securities Provision”).

Unless the Fund is relying on the Limited Derivatives User Exception (as defined below), the Fund must comply with Rule 18f-4 with respect to its Derivatives Transactions. Rule 18f-4, among other things, requires the Fund to adopt and implement a comprehensive written derivatives risk management program (“DRMP”) and comply with a relative or absolute limit on Fund leverage risk calculated based on value-at-risk (“VaR”). The DRMP is administered by a “derivatives risk manager,” who is appointed by the Board, including a majority of Independent Directors/Trustees, and periodically reviews the DRMP and reports to the Board.

Rule 18f-4 provides an exception from the DRMP, VaR limit and certain other requirements if the Fund’s “derivatives exposure” (as defined in Rule 18f-4) is limited to 10% of its net assets (as calculated in accordance with Rule 18f-4) and the Fund adopts and implements written policies and procedures reasonably designed to manage its derivatives risks (the “Limited Derivatives User Exception”). The Fund currently does not invest directly or indirectly in derivative instruments, but may in the future.

The European Union (and some other countries) are implementing similar requirements, which will affect the Fund when it enters into a derivatives transaction with a counterparty organized in that country or otherwise subject to that country’s derivatives regulations. Because these regulations are new and evolving (and some of the rules are not yet final), their impact remains unclear. These regulations could limit or impact the Fund’s ability to invest in derivatives and other instruments, limit the Fund’s ability to employ certain strategies that use derivatives and adversely affect the Fund’s performance, efficiency in implementing its strategy, liquidity and ability to pursue its investment objectives.

Effective in 2013, the Commodities Futures Trading Commission (“CFTC”) rules require advisers to certain registered investment companies to register with the CFTC as a commodity pool operators (“CPO”) if their investment companies are unable to meet certain trading and marketing limitations. The Fund’s Adviser has claimed relief from registration as a CPO. However, it is possible that the Adviser may be required to register as a CPO in the future and comply with any applicable reporting, disclosure or other regulatory requirements. Compliance with CFTC regulatory requirements will increase Fund expenses. Other potentially adverse regulatory initiatives could also develop.

It is also possible that additional government regulation of various types of derivative instruments, including futures, options and swap agreements, may limit or prevent the Fund from using such instruments as a part of its investment strategy, and could ultimately prevent the Fund from being able to achieve its investment objective. It is impossible to fully predict the effects of past, present or future legislation and regulation in this area, but the effects could be substantial and adverse. It is possible that legislative and regulatory activity could limit or restrict the ability of the Fund to use certain instruments as a part of its investment strategy. Limits or restrictions applicable to the counterparties with which the Fund may engage in derivative transactions could also prevent the Fund from using certain instruments.

There is a possibility of future regulatory changes altering, perhaps to a material extent, the nature of an investment in the Fund or the ability of the Fund to continue to implement its investment strategy. The futures, options and swaps markets are subject to comprehensive statutes, regulations, and margin requirements. In addition, the SEC, CFTC and the exchanges are authorized to take extraordinary actions in the event of a market emergency, including, for example, the implementation or reduction of speculative position limits, the implementation of higher margin requirements, the establishment of daily price limits and the suspension of trading. The regulation of futures, options and swaps transactions in the U.S. is a rapidly changing area of law and is subject to modification by government and judicial action.

In 2010, the U.S. government enacted legislation that provides for new regulation of the derivatives market, including clearing, margin, reporting and registration requirements. The CFTC and certain futures exchanges have also established limits, referred to as “position limits,” on the maximum net long or net short positions which any person may hold or control in particular options and futures contracts. All positions owned or controlled by the same person or entity, even if in different accounts, may be aggregated for purposes of determining whether the applicable position limits have been exceeded. Thus, even if the Fund does not intend to exceed applicable position limits, it is possible that different clients managed by the Adviser and its affiliates may be aggregated for this purpose. The trading decisions of the Adviser may have to be modified and positions held by the Fund may have to be liquidated in order to avoid exceeding such limits. The modification of investment decisions or the elimination of open positions, if it occurs, may adversely affect the profitability of the Fund.

The SEC has in the past adopted interim rules requiring reporting of all short positions on securities above a certain *de minimis* threshold and may adopt rules requiring monthly and/or enhanced public disclosure in the future. In addition, other non-U.S. jurisdictions where the Fund may trade have adopted reporting requirements. If the Fund’s securities short positions or its strategy become generally known, it could have a significant effect on the Adviser’s ability to implement its investment strategy. In particular, it would make it more likely that other investors could cause a “short squeeze” in the securities held short by the Fund forcing the Fund to cover its positions at a loss. Such reporting requirements may also limit the Adviser’s ability to access management and other personnel at certain companies where the Adviser seeks to take a short position. In addition, if other investors engage in copycat behavior by taking positions in the same issuers as the Fund, the cost of borrowing securities to sell short could increase drastically and the availability of such securities to the Fund could decrease drastically. Such events could make the Fund unable to execute its investment strategy. In addition, the SEC recently proposed additional restrictions on short sales. If the SEC were to adopt additional restrictions regarding short sales, they could restrict the Fund’s ability to engage in short sales of securities in certain circumstances, and the Fund may be unable to execute its investment strategy as a result.

The SEC and regulatory authorities in other jurisdictions may adopt (and in certain cases, have adopted) bans on short sales of certain securities in response to market events. Bans on short selling may make it impossible for the Fund to execute certain investment strategies and may have a material adverse effect on the Fund’s ability to generate returns.

Equity Securities

Equity securities include common stocks, preferred stocks and securities convertible into common stocks, such as convertible bonds, warrants, rights and options. The value of equity securities varies in response to many factors, including the activities and financial condition of individual companies, the business market in which individual companies compete and general market and economic conditions. Equity securities fluctuate in value, often based on factors unrelated to the value of the issuer of the securities, and such fluctuations can be significant.

Common Stock

Common stock represents an equity (ownership) interest in a company, and usually possesses voting rights and earns dividends. Dividends on common stock are not fixed but are declared at the discretion of the issuer. Common stock generally represents the riskiest investment in a company. In addition, common stock generally has the greatest appreciation and depreciation potential because increases and decreases in earnings are usually reflected in a company's stock price.

Convertible Securities

Convertible securities include fixed income securities that may be exchanged or converted into a predetermined number of shares of the issuer's underlying common stock at the option of the holder during a specified period. Convertible securities may take the form of convertible preferred stock, convertible bonds or debentures, units consisting of "usable" bonds and warrants or a combination of the features of several of these securities. Convertible securities are senior to common stocks in an issuer's capital structure, but are usually subordinated to non-convertible fixed income securities. While providing a fixed-income stream (generally higher in yield than the income derivable from common stock but lower than that afforded by a similar nonconvertible security), a convertible security also gives an investor the opportunity, through its conversion feature, to participate in the capital appreciation of the issuing company depending upon a market price advance in the convertible security's underlying common stock.

Preferred Stock

Preferred stock is a class of stock that has features of debt because it generally entitles the holder to periodic payments at a fixed rate of return. Preferred stock has a preference over common stock as to the payment of dividends and the recovery of investment should a company be liquidated, although preferred stock is usually junior to any outstanding debt or fixed income securities of the issuer. Preferred stock typically does not possess voting rights and its market value may change based on changes in interest rates.

The fundamental risk of investing in common and preferred stock is the risk that the value of the stock might decrease. Stock values fluctuate in response to the activities of an individual company or in response to general market and/or economic conditions. Historically, common stocks have provided greater long-term returns and have entailed greater short-term risks than preferred stocks, fixed income securities and money market investments. The market value of all securities, including common and preferred stocks, is based upon the market's perception of value and not necessarily the book value of an issuer or other objective measures of a company's worth. Preferred stock may be subject to more fluctuations in market value, due to changes in market participants' perceptions of the issuer's ability to continue to pay dividends, than debts of the same issuer.

A preferred stock may be considered either debt or equity, depending on the economic characteristics exhibited by such preferred stock.

Fixed Income Securities

Yields on fixed income securities are dependent on a variety of factors, including the general conditions of the money market and other fixed income securities markets, the size of a particular offering, the maturity of the obligation and the rating of the issue. An investment in any Fund will be subjected to risk even if all fixed income securities in the Fund's portfolio are paid in full at maturity. All fixed income securities, including U.S. Government securities, can change in value when there is a change in interest rates or the issuer's actual or perceived creditworthiness or ability to meet its obligations.

There is normally an inverse relationship between the market value of securities sensitive to prevailing interest rates and actual changes in interest rates. In other words, an increase in interest rates produces a decrease in market value. The longer the remaining maturity (and duration) of a security, the greater will be the effect of interest rate changes on the market value of that security. Changes in the ability of an issuer to make payments of interest and principal and in the markets' perception of an issuer's creditworthiness will also affect the market value of the fixed income securities of that issuer. Obligations of issuers of fixed income securities (including municipal securities) are subject to the provisions of bankruptcy, insolvency, and other laws affecting the rights and remedies of creditors, such as the Federal Bankruptcy Reform Act of 1978. In addition, the obligations of municipal issuers may become subject to laws enacted in the future by Congress, state legislatures, or referenda extending the time for payment of principal and/or interest, or imposing other

constraints upon enforcement of such obligations or upon the ability of municipalities to levy taxes. Changes in the ability of an issuer to make payments of interest and principal and in the market's perception of an issuer's creditworthiness will also affect the market value of the fixed income securities of that issuer. The possibility exists, therefore, that, the ability of any issuer to pay, when due, the principal of and interest on its fixed income securities may become impaired.

The corporate fixed income securities in which the Fund may invest include corporate bonds and notes and short-term investments such as commercial paper and variable rate demand notes. Commercial paper (short-term promissory notes) is issued by companies to finance their or their affiliate's current obligations and is frequently unsecured. Variable and floating rate demand notes are unsecured obligations redeemable upon not more than 30 days' notice. These obligations include master demand notes that permit investment of fluctuating amounts at varying rates of interest pursuant to a direct arrangement with the issuer of the instrument. The issuer of these obligations often has the right, after a given period, to prepay the outstanding principal amount of the obligations upon a specified number of days' notice. These obligations generally are not traded, nor generally is there an established secondary market for these obligations. To the extent a demand note does not have a 7-day or shorter demand feature and there is no readily available market for the obligation, it is treated as an illiquid security.

Fixed income securities are subject to a variety of risks, such as interest rate risk, income risk, call (or prepayment) risk, inflation risk, credit risk and (in the case of foreign securities) country and currency risk.

Foreign (Non-U.S.) Investments - General

To the extent consistent with its investment objective and strategies, the Fund may invest in foreign securities, including bonds and other fixed-income securities of foreign issuers. Foreign fixed-income securities may include eurodollar convertible securities, which are fixed-income securities that are issued in U.S. dollars outside the United States and are convertible into or exchangeable for equity securities of the same or a different issuer.

Investment in foreign securities involves special risks. These include market risk, interest rate risk and the risks of investing in securities of foreign issuers and of companies whose securities are principally traded outside the United States on foreign exchanges or foreign over-the-counter markets and in investments denominated in foreign currencies. Market risk involves the possibility that security prices will decline over short or even extended periods. The markets tend to be cyclical, with periods of generally rising prices and periods of generally declining prices. These cycles will affect the value of the Fund to the extent that it invests in foreign securities. The holdings of the Fund, to the extent that it invests in fixed-income securities, will be sensitive to changes in interest rates and the interest rate environment. Generally, the prices of bonds and debt securities fluctuate inversely with interest rate changes. In addition, the performance of investments in securities denominated in a foreign currency will depend on the strength of the foreign currency against the U.S. dollar and the interest rate environment in the country issuing the currency. Absent other events which could otherwise affect the value of a foreign security (such as a change in the political climate or an issuer's credit quality), appreciation in the value of the foreign currency generally can be expected to increase the value of a foreign currency-denominated security in terms of U.S. dollars. A rise in foreign interest rates or decline in the value of the foreign currency relative to the U.S. dollar generally can be expected to depress the value of a foreign currency-denominated security.

There are other risks and costs involved in investing in foreign securities which are in addition to the usual risks inherent in domestic investments. Investment in foreign securities involves higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Foreign investments also involve risks associated with the level of currency exchange rates, less complete financial information about the issuers, less market liquidity, more market volatility and political instability. Future political and economic developments, the possible imposition of withholding taxes on dividend income, the possible seizure or nationalization of foreign holdings, the possible establishment of exchange controls, or the adoption of other governmental restrictions might adversely affect an investment in foreign securities. Additionally, foreign banks and foreign branches of domestic banks are subject to less stringent reserve requirements, and to different accounting, auditing and recordkeeping requirements. Also, the legal remedies for investors may be more limited than the remedies available in the United States. Additionally, many countries throughout the world are dependent on a healthy U.S. economy and are adversely affected when the U.S. economy weakens or its markets decline. For example, the decline in the U.S. subprime mortgage market quickly spread throughout global credit markets, triggering a liquidity crisis that affected fixed-income and equity markets around the world. European countries can be affected by the significant fiscal and monetary controls that the European Economic and Monetary Union ("EMU") imposes for membership. Europe's economies are diverse, its governments are decentralized, and its cultures vary widely. Several European Union ("EU") countries, including Greece, Ireland, Italy, Spain and Portugal, have faced budget issues, some of which may have negative long-term effects for the economies of those countries and other EU countries. There is continued concern about national-level support for the euro and the accompanying coordination of fiscal and wage policy among EMU member countries. Member countries are required to maintain tight control over inflation, public debt, and budget deficit to qualify for membership in the EMU. These requirements can severely limit the ability of EMU member countries to implement monetary policy to address regional economic conditions.

On January 31, 2020, the United Kingdom ("UK") left the EU. This departure, commonly referred to as "Brexit," commenced a transition period that expired on December 31, 2020. On December 24, 2020, negotiators representing the UK and the EU came to a preliminary

trade agreement, the EU-UK Trade and Cooperation Agreement (“TCA”), which is an agreement on the terms governing certain aspects of the EU’s and UK’s relationship following the end of the transition period. On December 30, 2020, the UK and the EU signed the TCA, which was ratified by the British Parliament on the same day. The TCA was subsequently ratified by the EU Parliament and entered into force on May 1, 2021. However, many aspects of the UK-EU trade relationship remain subject to further negotiation. There is significant market uncertainty regarding Brexit’s ramifications, and the range and potential implications of possible political, regulatory, economic, and market outcomes are difficult to predict. This uncertainty may affect other countries in the EU and elsewhere, and may cause volatility within the EU, triggering prolonged economic downturns in certain countries within the EU. In addition, Brexit may create additional and substantial economic stresses for the UK, including a contraction of the UK economy and price volatility in UK stocks, decreased trade, capital outflows, devaluation of the British pound, wider corporate bond spreads due to uncertainty and declines in business and consumer spending as well as foreign direct investment. Brexit may also adversely affect UK-based financial firms that have counterparties in the EU or participate in market infrastructure (trading venues, clearing houses, settlement facilities) based in the EU. As a result, the Fund may be exposed to volatile trading markets and significant and unpredictable currency fluctuations over a short period of time, and potentially lower economic growth in the UK, Europe and globally. Securities issued by companies domiciled in the UK could be subject to changing regulatory and tax regimes. Banking and financial services companies that operate in the UK or EU could be disproportionately impacted by these actions. Further insecurity in EU membership or the abandonment of the euro could exacerbate market and currency volatility and negatively impact the Fund’s investments in securities issued by companies located in EU countries. The impact of these actions, especially if they occur in a disorderly fashion, is not clear but could be significant and far-reaching, and the resulting market volatility may have an adverse effect on the performance of the Fund.

Many non-governmental issuers, and even certain governments, have defaulted on, or been forced to restructure, their debts; many other issuers have faced difficulties obtaining credit or refinancing existing obligations; financial institutions have in many cases required government or central bank support, have needed to raise capital, and/or have been impaired in their ability to extend credit; and financial markets in Europe and elsewhere have experienced extreme volatility and declines in asset values and liquidity. These difficulties may continue, worsen or spread within and without Europe. Responses to the financial problems by European governments, central banks and others, including austerity measures and reforms, may not work, may result in social unrest and may limit future growth and economic recovery or have other unintended consequences. Further defaults or restructurings by governments and others of their debt could have additional adverse effects on economies, financial markets and asset valuations around the world. In addition, one or more countries may abandon the euro, the common currency of the European Union, and/or withdraw from the European Union. The impact of these actions, especially if they occur in a disorderly fashion, is not clear but could be significant and far-reaching. A number of countries in the Middle East and Europe have suffered terror attacks, and additional attacks may occur in the future. Eastern Europe and the Middle East have experienced ongoing military conflict; this conflict may expand and military attacks could continue to occur in the Middle East and Europe. Europe has also been struggling with mass migration from the Middle East and Africa. European elections could, depending on the outcomes, further call into question the future direction of the EU. The ultimate effects of these events and other socio-political or geopolitical issues are not known but could profoundly affect global economies and markets. Whether or not the Fund invests in securities of issuers located in Europe or with significant exposure to European issuers or countries, these events could negatively affect the value and liquidity of the Fund’s investments.

To the extent consistent with its investment objectives and strategies, the Fund may invest in foreign debt, including the securities of foreign governments. Several risks exist concerning such investments, including the risk that foreign governments may default on their obligations, may not respect the integrity of such debt, may attempt to renegotiate the debt at a lower rate, and may not honor investments by U.S. entities or citizens.

Although the Fund may invest in securities denominated in foreign currencies, its portfolio securities and other assets are valued in U.S. dollars. Currency exchange rates may fluctuate significantly over short periods of time causing, together with other factors, the Fund’s NAV to fluctuate as well. Currency exchange rates can be affected unpredictably by the intervention or the failure to intervene by U.S. or foreign governments or central banks, or by currency controls or political developments in the United States or abroad. To the extent that the Fund’s total assets, adjusted to reflect the Fund’s net position after giving effect to currency transactions, are denominated in the currencies of foreign countries, the Fund will be more susceptible to the risk of adverse economic and political developments within those countries.

Dividends and interest payable on the Fund’s foreign portfolio securities may be subject to foreign withholding taxes. To the extent such taxes are not offset by credits or deductions allowed to investors under U.S. federal income tax law, they may reduce the net return to the shareholders.

The Fund’s income and, in some cases, capital gains from foreign stocks and securities will be subject to applicable taxation in certain of the countries in which they invest, and treaties between the United States and such countries may not be available in some cases to reduce the otherwise applicable tax rates.

The Fund also is subject to the possible imposition of exchange control regulations or freezes on the convertibility of currency. In addition, through the use of forward currency exchange contracts with other instruments, the respective net currency positions of the Fund may expose it to risks independent of its securities positions. Although the net long and short foreign currency exposure of the

Fund will not exceed its respective total asset values, to the extent that the Fund is fully invested in foreign securities while also maintaining currency positions, it may be exposed to greater risk than it would have if it did not maintain the currency positions.

The Fund's foreign securities are generally held outside the United States in the primary market for the securities in the custody of certain eligible foreign banks and trust companies, as permitted under the 1940 Act ("foreign sub-custodians"). Settlement practices for foreign securities may differ from those in the United States. Some countries have limited governmental oversight and regulation of industry practices, stock exchanges, depositories, registrars, brokers and listed companies, which increases the risk of corruption and fraud and the possibility of losses to the Fund. In particular, under certain circumstances, foreign securities may settle on a delayed delivery basis, meaning that the Fund may be required to make payment for securities before the Fund has actually received delivery of the securities or deliver securities prior to the receipt of payment. Typically, in these cases, the Fund will receive evidence of ownership in accordance with the generally accepted settlement practices in the local market entitling the Fund to deliver payment at a future date, but there is a risk that the security will not be delivered to the Fund or that payment will not be received, although the Fund and its foreign sub-custodians take reasonable precautions to mitigate this risk.

Foreign markets also have different clearance and settlement procedures, and in certain markets there have been times when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct such transactions. Such delays in settlement could result in temporary periods when a portion of the assets of the Fund remain uninvested and no return is earned on such assets. The inability of the Fund or, as applicable, an Underlying Fund to make intended security purchases or sales due to settlement problems could result in missed attractive investment opportunities, losses to the Fund or the Underlying Fund due to subsequent declines in value of the portfolio securities or, if the Fund or, as applicable, an Underlying Fund has entered into a contract to sell the securities, possible liability to the purchaser. Losses can also result from lost, stolen or counterfeit securities; defaults by brokers and banks; failures or defects of the settlement system; or poor and improper record keeping by registrars and issuers.

Share blocking refers to a practice in certain foreign markets under which an issuer's securities are blocked from trading at the custodian or sub-custodian level for a specified number of days before and, in certain instances, after a shareholder meeting where a vote of shareholders takes place. The blocking period can last up to several weeks. Share blocking may prevent the Underlying Funds from buying or selling securities during this period, because during the time shares are blocked, trades in such securities will not settle. It may be difficult or impossible to lift blocking restrictions, with the particular requirements varying widely by country.

Foreign (Non-U.S.) Investments—Emerging and Frontier Markets

The Fund may also invest in countries with emerging economies or securities markets. Emerging and frontier market countries are generally located in the Asia and Pacific regions, the Middle East, Eastern Europe, Central America, South America and Africa. Political and economic structures in many of these countries may be undergoing significant evolution and rapid development, and these countries may lack the social, political and economic stability characteristics of more developed countries.

In general, the securities markets of emerging countries are less liquid, subject to greater price volatility, and have a smaller market capitalization than the U.S. securities markets. In certain countries, there may be fewer publicly traded securities and the market may be dominated by a few issues or sectors. Issuers and securities markets in such countries are not subject to as extensive and frequent accounting, financial and other reporting requirements or as comprehensive government regulations as are issuers and securities markets in the United States. In particular, the assets and profits appearing on the financial statements of emerging country issuers may not reflect their financial position or results of operations in the same manner as financial statements for U.S. issuers. Substantially less information may be publicly available about emerging country issuers than is available about issuers in the United States.

Emerging country securities markets are typically marked by a high concentration of market capitalization and trading volume in a small number of issuers representing a limited number of industries, as well as a high concentration of ownership of such securities by a limited number of investors. The markets for securities in certain emerging countries are in the earliest stages of their development. Even the markets for relatively widely traded securities in emerging countries may not be able to absorb, without price disruptions, a significant increase in trading volume or trades of a size customarily undertaken by institutional investors in the securities markets of developed countries. The limited size of many of these securities markets can cause prices to be erratic for reasons apart from factors that affect the soundness and competitiveness of the securities issuers. For example, prices may be unduly influenced by traders who control large positions in these markets. Additionally, market making and arbitrage activities are generally less extensive in such markets, which may contribute to increased volatility and reduced liquidity of such markets. The limited liquidity of emerging country securities may also affect the Fund's ability to accurately value its portfolio securities or to acquire or dispose of securities at the price and time it wishes to do so or in order to meet redemption requests.

Certain emerging market countries may have antiquated legal systems, which may adversely impact the Fund. For example, while the potential liability of a shareholder in a U.S. corporation with respect to acts of the corporation is generally limited to the amount of the shareholder's investment, the notion of limited liability is less clear in certain emerging market countries. Similarly, the rights of investors in emerging market companies may be more limited than those of shareholders in U.S. corporations. In addition, the systems of corporate governance to which issuers in certain emerging countries are subject may be less advanced than the systems to which

issuers located in more developed countries are subject, and therefore, shareholders of such issuers may not receive many of the protections available to shareholders of issuers located in more developed countries.

Illiquid and Restricted Securities

Pursuant to Rule 22e-4 under the 1940 Act, the Fund may invest up to 15% of its net assets in illiquid investments. An illiquid investment is an investment that the Fund reasonably expects cannot be sold or disposed of in current market conditions within 7 calendar days or less without the sale or disposition significantly changing the market value of the investment. Illiquid investments include securities that are illiquid by virtue of the absence of a readily available market (e.g., because trading in the security is suspended or because market makers do not exist or will not entertain bids or offers) or legal or contractual restrictions on resale (e.g., because they have not been registered under the Securities Act). Illiquid investments include: repurchase agreements and time deposits with a notice or demand period of more than seven days; interest rate; currency, mortgage and credit default swaps; interest rate caps; floors and collars; municipal leases; certain restricted securities, such as those purchased in a private placement of securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid; and certain over-the-counter (“OTC”) options and cover for OTC options. Securities that have legal or contractual restrictions on resale but have a readily available market are not considered illiquid for purposes of this limitation. With respect to the Fund, repurchase agreements subject to demand are deemed to have a maturity equal to the notice period. Foreign (non-U.S.) securities that are freely tradable in their principal markets are not considered to be illiquid.

Restricted and other illiquid securities may be subject to the potential for delays on resale and uncertainty in valuation. The Fund might be unable to dispose of illiquid securities promptly or at reasonable prices and might thereby experience difficulty in satisfying redemption requests from shareholders. Fund might have to register restricted securities in order to dispose of them, resulting in additional expense and delay. Adverse market conditions could impede such a public offering of securities. To the extent an investment held by the Fund is deemed to be an illiquid investment or a less liquid investment, the Fund will be exposed to a greater liquidity risk.

As required by Rule 22e-4, the Trust has implemented a liquidity risk management program and related procedures to identify illiquid investments pursuant to Rule 22e-4. If the limitation on illiquid investments is exceeded, other than by a change in market values, the condition will be reported to the Board and, when required, to the SEC.

A large institutional market exists for certain securities that are not registered under the Securities Act, including foreign (non-U.S.) securities. The fact that there are contractual or legal restrictions on resale to the general public or to certain institutions may not be indicative of the liquidity of such investments. Rule 144A under the Securities Act allows such a broader institutional trading market for securities otherwise subject to restrictions on resale to the general public. Rule 144A establishes a “safe harbor” from the registration requirements of the Securities Act for resale of certain securities to qualified institutional buyers. Rule 144A has produced enhanced liquidity for many restricted securities, and market liquidity for such securities may continue to expand as a result of this regulation and the consequent existence of the PORTAL system, which is an automated system for the trading, clearance and settlement of unregistered securities of domestic and foreign (non-U.S.) issuers sponsored by the Financial Industry Regulatory, Inc.

Rule 144A securities and Section 4(a)(2) commercial paper that have been deemed liquid as described above will continue to be monitored by the Adviser to determine if the security is no longer liquid as the result of changed conditions. Investing in Rule 144A securities or Section 4(a)(2) commercial paper could have the effect of increasing the amount of the Fund’s assets invested in illiquid securities if institutional buyers are unwilling to purchase such securities.

Insured Bank Obligations

The Fund may invest in insured bank obligations. The Federal Deposit Insurance Corporation (“FDIC”) insures the deposits of federally insured banks and savings and loan associations (collectively referred to as “banks”), currently up to \$250,000. The Fund may purchase bank obligations, which are fully insured as to principal by the FDIC. Currently, to remain fully insured as to principal, these investments must be limited to \$250,000 per bank; if the principal amount and accrued interest together exceed \$250,000, the excess principal and accrued interest will not be insured. Insured bank obligations may have limited marketability.

Lending Portfolio Securities

For the purpose of achieving income, the Fund may lend its portfolio securities, provided (1) the loan is secured continuously by collateral consisting of U.S. Government securities or cash or cash equivalents (cash, U.S. Government securities, negotiable certificates of deposit, bankers’ acceptances or letters of credit) maintained on a daily mark-to-market basis in an amount at least equal to the current market value of the securities loaned, (2) the Fund may at any time call the loan and obtain the return of securities loaned, (3) the Fund will receive any interest or dividends received on the loaned securities, and (4) the aggregate value of the securities loaned will not at any time exceed one-third of the total assets of the Fund.

As with other extensions of credit, there are risks that collateral could be inadequate in the event of the borrower failing financially, which could result in actual financial loss, and risks that recovery of loaned securities could be delayed, which could result in interference with portfolio management decisions or exercise of ownership rights. The Fund will be responsible for the risks associated with the investment of cash collateral, including the risk that the Fund may lose money on the investment or may fail to earn sufficient income to meet its obligations to the borrower. In addition, the Fund may lose its right to vote its shares of the loaned securities at a shareholders meeting if the Adviser does not recall or does not timely recall the loaned securities, or if the borrower fails to return the recalled securities in advance of the record date for the meeting.

Securities lending involves counterparty risk, including the risk that the loaned securities may not be returned or returned in a timely manner and/or a loss of rights in the collateral if the borrower or the lending agent defaults or fails financially. This risk is increased when the Fund's loans are concentrated with a single or limited number of borrowers. There are no limits on the number of borrowers to which the Fund may lend securities and the Fund may lend securities to only one or a small group of borrowers. As of the date of this SAI, the Fund does not engage in securities lending.

Recent Market Events.

The Fund could lose money over short periods due to short-term market movements and over longer periods during more prolonged market downturns. The value of a security or other instrument may decline due to changes in general market conditions, economic trends or events that are not specifically related to the issuer of the security or other instrument, or factors that affect a particular issuer or issuers, country, group of countries, region, market, industry, group of industries, sector or asset class. During a general market downturn, multiple asset classes may be negatively affected. Changes in market conditions and interest rates generally do not have the same impact on all types of securities and instruments.

Stresses associated with the 2008 financial crisis in the United States and global economies peaked approximately a decade ago, but periods of unusually high volatility in the financial markets and restrictive credit conditions, sometimes limited to a particular sector or a geography, continue to recur. Some countries, including the United States, have adopted and/or are considering the adoption of more protectionist trade policies, a move away from the tighter financial industry regulations that followed the financial crisis, and/or substantially reducing corporate taxes. The exact shape of these policies is still being considered, but the equity and debt markets may react strongly to expectations of change, which could increase volatility, especially if the market's expectations are not borne out. A rise in protectionist trade policies, and the possibility of changes to some international trade agreements, could affect the economies of many nations in ways that cannot necessarily be foreseen at the present time. In addition, geopolitical and other risks, including environmental and public health, may add to instability in world economies and markets generally. Economies and financial markets throughout the world are becoming increasingly interconnected. As a result, whether or not the Fund invests in securities of issuers located in or with significant exposure to countries experiencing economic, political and/or financial difficulties, the value and liquidity of the Fund's investments may be negatively affected by such events.

COVID-19 resulted in travel restrictions, closed international borders, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery, prolonged quarantines, cancellations, business and school closings, supply chain disruptions, and lower consumer demand, as well as general concern and uncertainty. The impact of COVID-19, and other infectious illness outbreaks that may arise in the future, could adversely affect the economies of many nations or the entire global economy, individual issuers and capital markets in ways that cannot necessarily be foreseen. In addition, as a possible consequence of the measures taken in response to the spread of COVID-19 and the resulting market disruptions, volatility and liquidity concerns, the Fund may have difficulty in complying with the distribution requirements necessary for the Fund to maintain its status as a regulated investment company under the Internal Revenue Code.

Real Estate Investment Trusts

The Fund may invest in securities of real estate investment trusts ("REITs"). REITs are publicly traded corporations or trusts that specialize in acquiring, holding and managing residential, commercial or industrial real estate. A REIT is not taxed at the entity level on income distributed to its shareholders or unitholders if it distributes to shareholders or unitholders at least 90% of its taxable income for each taxable year and complies with regulatory requirements relating to its organization, ownership, assets and income.

REITs generally can be classified as "Equity REITs", "Mortgage REITs" and "Hybrid REITs." An Equity REIT invests the majority of its assets directly in real property and derives its income primarily from rents and from capital gains on real estate appreciation, which are realized through property sales. A Mortgage REIT invests the majority of its assets in real estate mortgage loans and services its income primarily from interest payments. A Hybrid REIT combines the characteristics of an Equity REIT and a Mortgage REIT. Although the Fund can invest in all three kinds of REITs, its emphasis is expected to be on investments in Equity REITs.

Investments in the real estate industry involve particular risks. The real estate industry has been subject to substantial fluctuations and declines on a local, regional and national basis in the past and may continue to be in the future. Real property values and income from real property may decline due to general and local economic conditions, overbuilding and increased competition, increases in property taxes and operating expenses, changes in zoning laws, casualty or condemnation losses, regulatory limitations on rents, changes in

neighborhoods and in demographics, increases in market interest rates, or other factors. Factors such as these may adversely affect companies that own and operate real estate directly, companies that lend to such companies, and companies that service the real estate industry.

Investments in REITs also involve risks. Equity REITs will be affected by changes in the values of and income from the properties they own, while Mortgage REITs may be affected by the credit quality of the mortgage loans they hold. In addition, REITs are dependent on specialized management skills and on their ability to generate cash flow for operating purposes and to make distributions to shareholders or unitholders. REITs may have limited diversification and are subject to risks associated with obtaining financing for real property, as well as to the risk of self-liquidation. REITs also can be adversely affected by their failure to qualify for tax-free pass-through treatment of their income under the Internal Revenue Code, or their failure to maintain an exemption from registration under the 1940 Act. In the event an investment fails to qualify as a REIT, the REIT will be subject to tax as a C corporation at U.S. federal income tax rates (currently, at a flat rate of 21%). The resulting corporate taxes could reduce the Fund's net assets, the amount of income available for distribution and the amount of the Fund's distributions. By investing in REITs indirectly through the Fund, a shareholder bears not only a proportionate share of the expenses of the Fund, but also may indirectly bear similar expenses of some of the REITs in which it invests.

Repurchase Agreements

The Fund may enter into repurchase agreements. In a repurchase agreement, an investor (such as the Fund) purchases a security (known as the "underlying security") from a securities dealer or bank. Any such dealer or bank must be deemed creditworthy by the Adviser. At that time, the bank or securities dealer agrees to repurchase the underlying security at a mutually agreed upon price on a designated future date. The repurchase price may be higher than the purchase price, the difference being income to the Fund, or the purchase and repurchase prices may be the same, with interest at an agreed upon rate due to the Fund on repurchase. In either case, the income to the Fund generally will be unrelated to the interest rate on the underlying securities. Repurchase agreements must be "fully collateralized," in that the market value of the underlying securities (including accrued interest) must at all times be equal to or greater than the repurchase price. Therefore, a repurchase agreement can be considered a loan collateralized by the underlying securities.

Repurchase agreements are generally for a short period of time, often less than a week, and will generally be used by the Fund to invest excess cash or as part of a temporary defensive strategy. Repurchase agreements that do not provide for payment within seven days will be treated as illiquid securities. In the event of a bankruptcy or other default by the seller of a repurchase agreement, the Fund could experience both delays in liquidating the underlying security and losses. These losses could result from: (a) possible decline in the value of the underlying security while the Fund is seeking to enforce its rights under the repurchase agreement; (b) possible reduced levels of income or lack of access to income during this period; and (c) expenses of enforcing its rights.

Securities of Other Investment Companies

The Fund may invest in securities of other investment companies. The Fund's investments in an underlying portfolio of exchange traded funds ("ETFs"), mutual funds and closed-end funds involve certain additional expenses and certain tax results, which would not be present in a direct investment in the underlying securities. Pursuant to Rule 12d1-4, the Fund and any "affiliated persons," as defined by the 1940 Act, must comply with certain conditions in order to purchase more than 3% in the aggregate of the total outstanding securities of any underlying fund. Accordingly, when affiliated persons hold shares of any of the underlying funds, the Fund's ability to invest fully in shares of those funds is restricted, and the Adviser must then, in some instances, select alternative investments that would not have been its first preference. In addition, Section 12(d)(1)(F) allows an alternative method for unaffiliated funds to invest in underlying funds provided such investments are made in accordance with the requirements of Section 12(d)(1)(F). An underlying fund whose shares are purchased by the Fund in reliance on Section 12(d)(1)(F) will not be obligated to redeem shares held by the Fund in an amount exceeding 1% of the underlying fund's outstanding securities during any period of less than 30 days. Shares held by the Fund in excess of 1% of an underlying fund's outstanding securities therefore, will be considered not readily marketable securities, which, together with other such securities, may not exceed 15% of the Fund's total assets.

Investment decisions by the investment advisers of the underlying funds are made independently of the Fund and its Adviser. Therefore, the investment adviser of one underlying fund may be purchasing shares of the same issuer whose shares are being sold by the Adviser of the Fund. The result would be an indirect expense to the Fund without accomplishing any investment purpose.

Closed-End Investment Companies

Shares of closed-end funds are typically offered to the public in a one-time initial public offering by a group of underwriters who retain a spread or underwriting commission of between 4% or 6% of the initial public offering price. Such securities are then listed for trading on an exchange such as the New York Stock Exchange, the American Stock Exchange, the National Association of Securities Dealers Automated Quotation System (commonly known as "NASDAQ") and, in some cases, may be traded in other over-the-counter markets. Because the shares of closed-end funds cannot be redeemed upon demand to the issuer like the shares of an open-end investment company (such as the Fund), investors seek to buy and sell shares of closed-end funds in the secondary market.

The Fund generally will purchase shares of closed-end funds only in the secondary market. The Fund will incur normal brokerage costs on such purchases similar to the expenses the Fund would incur for the purchase of securities of any other type of issuer in the secondary market. The Fund may, however, also purchase securities of a closed-end fund in an initial public offering when, in the opinion of the Adviser, based on a consideration of the nature of the closed-end fund's proposed investments, the prevailing market conditions and the level of demand for such securities, they represent an attractive opportunity for growth of capital. The initial offering price typically will include a dealer spread, which may be higher than the applicable brokerage cost if the Fund purchased such securities in the secondary market.

The shares of many closed-end funds, after their initial public offering, frequently trade at a price per share, which is less than the net asset value per share, the difference representing the "market discount" of such shares. This market discount may be due in part to the investment objective of long-term appreciation, which is sought by many closed-end funds, as well as to the fact that the shares of closed-end funds are not redeemable by the holder upon demand to the issuer at the next determined net asset value but rather are subject to the principles of supply and demand in the secondary market. A relative lack of secondary market purchasers of closed-end fund shares also may contribute to such shares trading at a discount to their net asset value.

The Fund may invest in shares of closed-end funds that are trading at a discount to net asset value or at a premium to net asset value. There can be no assurance that the market discount on shares of any closed-end fund purchased by the Fund will ever decrease. In fact, it is possible that this market discount may increase and the Fund may suffer realized or unrealized capital losses due to further decline in the market price of the securities of such closed-end funds, thereby adversely affecting the net asset value of the Fund's shares. Similarly, there can be no assurance that any shares of a closed-end fund purchased by the Fund at a premium will continue to trade at a premium or that the premium will not decrease subsequent to a purchase of such shares by the Fund.

Closed-end funds may issue senior securities (including preferred stock and debt obligations) for the purpose of leveraging the closed-end fund's common shares in an attempt to enhance the current return to such closed-end fund's common shareholders. The Fund's investment in the common shares of closed-end funds that are financially leveraged may create an opportunity for greater total return on its investment, but at the same time may be expected to exhibit more volatility in market price and net asset value than an investment in shares of investment companies without a leveraged capital structure.

Exchange Traded Funds

ETFs are typically passively managed funds that track their related index and have the flexibility of trading like a security. They are managed by professionals and provide the investor with diversification, cost and tax efficiency, liquidity, marginability, are useful for hedging, have the ability to go long and short, and some provide quarterly dividends. Additionally, some ETFs are unit investment trusts (UITs) that have two markets. The primary market is where institutions swap "creation units" in block-multiples of 50,000 shares for in-kind securities and cash in the form of dividends. The secondary market is where individual investors can trade as little as a single share during trading hours on the exchange. This is different from open-ended mutual funds that are traded after hours once the net asset value (NAV) is calculated. ETFs share many similar risks with open-end and closed-end funds.

ETFs are shares issued by investment companies that are traded like traditional equity securities on a national stock exchange or the National Association of Securities Dealers Automated Quotation System ("NASDAQ") National Market System. An investment in an ETF generally represents the same primary risks as an investment in a conventional fund (*i.e.*, one that is not exchange traded) that has the same investment objectives, strategies and policies. The price of an ETF can fluctuate within a wide range, and the Fund could lose money investing in an ETF if the prices of the securities owned by the ETF go down. In addition, ETFs are subject to the following risks that do not apply to conventional open-end mutual funds: (i) the market price of the ETF's shares may trade at a discount to their net asset value; (ii) an active trading market for an ETF's shares may not develop or be maintained; or (iii) trading of an ETF's shares may be halted if the listing exchange's officials deem such action appropriate, the shares are de-listed from the exchange, or the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) halts stock trading generally.

ETF shares are not individually redeemable from the ETF, except upon termination of the ETF. To redeem from the ETF, an investor must accumulate enough ETF shares to reconstitute a creation unit. Upon redemption of a creation unit, an investor will receive securities underlying the ETF and cash identical to the portfolio deposit required of an investor wishing to purchase a creation unit that day. The Fund may sell ETF shares through a broker dealer.

The price of an ETF's shares is derived from and based upon the securities held by the ETF. Accordingly, the level of risk involved in the purchase or sale of an ETF is similar to the risk involved in the purchase or sale of traditional common

stock, with the exception that the pricing mechanism for ETFs generally is based on a basket of stocks. Disruptions in the markets for the securities underlying ETFs purchased or sold by the Fund could result in losses on ETFs.

Open-End Investment Companies

Under certain circumstances, an underlying fund may determine to make payment of a redemption by the Fund wholly or partly by a distribution in kind of securities from its portfolio, in lieu of cash, in conformity with the rules of the SEC. In such cases, the Fund may hold securities distributed by an underlying fund until the Adviser determines that it is appropriate to dispose of such securities.

Securities Options

The Fund may purchase and write (i.e., sell) put and call options. Such options may relate to particular securities or stock indices, and may or may not be listed on a domestic or foreign (non-U.S.) securities exchange and may or may not be issued by the Options Clearing Corporation. Options trading is a highly specialized activity that entails greater than ordinary investment risk. Options may be more volatile than the underlying instruments, and therefore, on a percentage basis, an investment in options may be subject to greater fluctuation than an investment in the underlying instruments themselves.

A call option for a particular security gives the purchaser of the option the right to buy, and the writer (seller) the obligation to sell, the underlying security at the stated exercise price at any time prior to the expiration of the option, regardless of the market price of the security. The premium paid to the writer is in consideration for undertaking the obligation under the option contract. A put option for a particular security gives the purchaser the right to sell the security at the stated exercise price at any time prior to the expiration date of the option, regardless of the market price of the security.

Stock index options are put options and call options on various stock indices. In most respects, they are identical to listed options on common stocks. The primary difference between stock options and index options occurs when index options are exercised. In the case of stock options, the underlying security, common stock, is delivered. However, upon the exercise of an index option, settlement does not occur by delivery of the securities comprising the index. The option holder who exercises the index option receives an amount of cash if the closing level of the stock index upon which the option is based is greater than, in the case of a call, or less than, in the case of a put, the exercise price of the option. This amount of cash is equal to the difference between the closing price of the stock index and the exercise price of the option expressed in dollars times a specified multiple. A stock index fluctuates with changes in the market value of the stocks included in the index. For example, some stock index options are based on a broad market index, such as the Standard & Poor's 500® Index or the Value Line Composite Index or a narrower market index, such as the Standard & Poor's 100®. Indices may also be based on an industry or market segment, such as the NYSE Arca Oil and Gas Index or the Computer and Business Equipment Index.

Options on stock indices are currently traded on the Chicago Board Options Exchange, the New York Stock Exchange, the American Stock Exchange, the Pacific Stock Exchange, the Philadelphia Stock Exchange and the NASDAQ PHLX.

The Fund's obligation to sell an instrument subject to a call option written by it, or to purchase an instrument subject to a put option written by it, may be terminated prior to the expiration date of the option by the Fund's execution of a closing purchase transaction, which is effected by purchasing on an exchange an option of the same series (i.e., same underlying instrument, exercise price and expiration date) as the option previously written. A closing purchase transaction will ordinarily be effected to realize a profit on an outstanding option, to prevent an underlying instrument from being called, to permit the sale of the underlying instrument or to permit the writing of a new option containing different terms on such underlying instrument. The cost of such a liquidation purchase plus transactions costs may be greater than the premium received upon the original option, in which event the Fund will have incurred a loss in the transaction. There is no assurance that a liquid secondary market will exist for any particular option. An option writer unable to effect a closing purchase transaction will not be able to sell the underlying instrument or liquidate the assets held in a segregated account, as described in the Cover Requirements section, until the option expires or the optioned instrument is delivered upon exercise. In such circumstances, the writer will be subject to the risk of market decline or appreciation in the instrument during such period.

If an option purchased by the Fund expires unexercised, the Fund realizes a loss equal to the premium paid. If the Fund enters into a closing sale transaction on an option purchased by it, that Fund will realize a gain if the premium received by that Fund on the closing transaction is more than the premium paid to purchase the option, or a loss if it is less. If an option written by the Fund expires on the stipulated expiration date or if the Fund enters into a closing purchase transaction, it will realize a gain (or loss if the cost of a closing purchase transaction exceeds the net premium received when the option is sold). If an option written by the Fund is exercised, the proceeds of the sale will be increased by the net premium originally received and that Fund will realize a gain or loss.

Certain Risks Regarding Options

There are several risks associated with transactions in options. For example, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives. In addition, a liquid secondary market for particular options, whether traded over-the-counter or on an exchange, may be absent for reasons which include the following: there may be insufficient trading interest in certain options; restrictions may be imposed by an exchange on opening transactions or closing transactions or both; trading halts, suspensions or other restrictions may be imposed with respect to particular classes or series of options or underlying securities or currencies; unusual or unforeseen circumstances may interrupt normal operations on an exchange; the facilities of an exchange or the Options Clearing Corporation may not at all times be adequate to handle current trading value; or one or more exchanges could, for economic or other reasons, decide or be compelled at some future date to discontinue the trading of options (or a particular class or series of options), in which event the secondary market on that exchange (or in that class or series of options) would cease to exist, although outstanding options that had been issued by the Options Clearing Corporation as a result of trades on that exchange would continue to be exercisable in accordance with their terms.

Successful use by the Fund of options on stock indices will be subject to the ability of the Adviser to correctly predict movements in the directions of the stock market. This requires different skills and techniques than predicting changes in the prices of individual securities. In addition, the Fund's ability to effectively hedge all or a portion of the securities in its portfolio, in anticipation of or during a market decline, through transactions in put options on stock indices, depends on the degree to which price movements in the underlying index correlate with the price movements of the securities held by the Fund. Inasmuch as the Fund's securities will not duplicate the components of an index, the correlation will not be perfect. Consequently, the

Fund bear the risk that the prices of its securities being hedged will not move in the same amount as the prices of its put options on the stock indices. It is also possible that there may be a negative correlation between the index and the Fund's securities that would result in a loss on both such securities and the options on stock indices acquired by the Fund.

The hours of trading for options may not conform to the hours during which the underlying securities are traded. To the extent that the options markets close before the markets for the underlying securities, significant price and rate movements can take place in the underlying markets that cannot be reflected in the options markets. The purchase of options is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The purchase of stock index options involves the risk that the premium and transaction costs paid by the Fund in purchasing an option will be lost as a result of unanticipated movements in prices of the securities comprising the stock index on which the option is based.

There is no assurance that a liquid secondary market on an options exchange will exist for any particular option, or at any particular time, and for some options no secondary market on an exchange or elsewhere may exist. If the Fund is unable to close out a call option on securities that it has written before the option is exercised, the Fund may be required to purchase the optioned securities in order to satisfy its obligation under the option to deliver such securities. If the Fund is unable to effect a closing sale transaction with respect to options on securities that it has purchased, it would have to exercise the option in order to realize any profit and would incur transaction costs upon the purchase and sale of the underlying securities.

Cover for Options Positions

Transactions using options (other than options that the Fund has purchased) expose the Fund to an obligation to another party. The Fund will not enter into any such transactions unless it owns either (i) an offsetting ("covered") position in securities or other options or (ii) cash or liquid securities with a value sufficient at all times to cover its potential obligations not covered as provided in (i) above.

Dealer Options

The Fund may engage in transactions involving dealer options as well as exchange-traded options. Certain additional risks are specific to dealer options. While the Fund might look to a clearing corporation to exercise exchange-traded options, if the Fund were to purchase a dealer option it would need to rely on the dealer from which it purchased the option to perform if the option were exercised. Failure by the dealer to do so would result in the loss of the premium paid by the Fund as well as loss of the expected benefit of the transaction.

Exchange-traded options generally have a continuous liquid market while dealer options may not. Consequently, the Fund may generally be able to realize the value of a dealer option it has purchased only by exercising or reselling the option to the dealer who issued it. Similarly, when the Fund writes a dealer option, that Fund may generally be able to close out the option prior to its expiration only by entering into a closing purchase transaction with the dealer to whom that Fund originally wrote the option. While the Fund will seek to enter into dealer options only with dealers who will agree to and which are expected to be capable of entering into closing transactions with the Fund, there can be no assurance that the Fund will at any time be able to liquidate a dealer option at a favorable price at any time prior to expiration. Unless the Fund, as a covered dealer call option writer, is able to effect a closing purchase transaction, it will not be able to liquidate securities (or other assets) used as cover until the option expires or is exercised. In the event of insolvency of the other party, the Fund may be unable to liquidate a dealer option. With respect to options written by the Fund, the inability to enter into a closing transaction may result in material losses to the Fund. For example, because the Fund must maintain a secured position with respect to any call option on a security it writes, the Fund may not sell the assets, which it has segregated to secure the position while it is obligated under the option. This requirement may impair the Fund's ability to sell portfolio securities at a time when such sale might be advantageous.

The Staff of the SEC has taken the position that purchased dealer options are illiquid securities. The Fund may treat the cover used for written dealer options as liquid if the dealer agrees that the Fund may repurchase the dealer options they have written for a maximum price to be calculated by a predetermined formula. In such cases, the dealer option would be considered illiquid only to the extent the maximum purchase price under the formula exceeds the intrinsic value of the option. Accordingly, the Fund will treat dealer options as subject to the Fund's limitation on illiquid securities. If the SEC changes its position on the liquidity of dealer options, the Fund will change its treatment of such instruments accordingly.

Options on Futures Contracts

The Fund may purchase and sell options on the same types of futures in which it may invest. Options on futures are similar to options on underlying instruments except that options on futures give the purchaser the right, in return for the premium paid, to assume a position in a futures contract (a long position if the option is a call and a short position if the option is a put), rather than to purchase or sell the futures contract, at a specified exercise price at any time during the period of the option. Upon

exercise of the option, the delivery of the futures position by the writer of the option to the holder of the option will be accompanied by the delivery of the accumulated balance in the writer's futures margin account which represents the amount by which the market price of the futures contract, at exercise, exceeds (in the case of a call) or is less than (in the case of a put) the exercise price of the option on the futures contract. Purchasers of options who fail to exercise their options prior to the exercise date suffer a loss of the premium paid.

Spread Transactions

The Fund may purchase covered spread options from securities dealers. These covered spread options are not presently exchange-listed or exchange-traded. The purchase of a spread option gives the Fund the right to put securities that it owns at a fixed dollar spread or fixed yield spread in relationship to another security that the Fund does not own, but which is used as a benchmark. The risk to the Fund, in addition to the risks of dealer options described above, is the cost of the premium paid as well as any transaction costs. The purchase of spread options will be used to protect the Fund against adverse changes in prevailing credit quality spreads, i.e., the yield spread between high quality and lower quality securities. This protection is provided only during the life of the spread options.

Short Sales

The Fund may sell securities short as an outright investment strategy and to offset potential declines in long positions in similar securities. A short sale is a transaction in which the Fund sells a security it does not own or have the right to acquire (or that it owns but does not wish to deliver) in anticipation that the market price of that security will decline.

When the Fund makes a short sale, the broker-dealer through which the short sale is made must borrow the security sold short and deliver it to the party purchasing the security. The Fund is required to make a margin deposit in connection with such short sales; the Fund may have to pay a fee to borrow particular securities and will often be obligated to pay over any dividends and accrued interest on borrowed securities.

If the price of the security sold short increases between the time of the short sale and the time the Fund covers its short position, the Fund will incur a loss; conversely, if the price declines, the Fund will realize a capital gain. Any gain will be decreased, and any loss increased, by the transaction costs described above. The successful use of short selling may be adversely affected by imperfect correlation between movements in the price of the security sold short and the securities being hedged.

To the extent the Fund sells securities short, it will provide collateral to the broker-dealer and (except in the case of short sales "against the box") will maintain additional asset coverage in the form of cash, U.S. government securities or other liquid securities with its custodian in a segregated account in an amount at least equal to the difference between the current market value of the securities sold short and any amounts required to be deposited as collateral with the selling broker. A short sale is "against the box" to the extent the Fund contemporaneously owns, or has the right to obtain at no added cost, securities identical to those sold short.

Positions in shorted securities are speculative and riskier than "long" positions (purchases) because the cost of the replacement security is unknown. Therefore, the potential loss on an uncovered short is unlimited, whereas the potential loss on long positions is limited to the original purchase price. Any strategy that includes selling securities short could suffer significant losses. If the Fund is required to cover its short positions in securities at the same time other short-sellers are trying to borrow or buy such securities, a "short squeeze" could occur, causing the stock price to rise and making it more likely that the Fund will have to cover its short positions at an unfavorable

price. Shorting may result in higher transaction costs (such as interest and dividends), which reduce the Fund's return, and may result in higher taxes.

Structured Notes, Bonds and Debentures

Typically, the value of the principal and/or interest on these instruments is determined by reference to changes in the value of specific currencies, interest rates, commodities, indexes or other financial indicators (the "Reference") or the relevant change in two or more References. The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. The terms of the structured securities may provide that in certain circumstances no principal is due at maturity and, therefore, may result in the loss of the Fund's entire investment. The value of structured securities may move in the same or the opposite direction as the value of the Reference, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value of the security at maturity. In addition, the change in interest rate or the value of the security at maturity may be a multiple of the change in the value of the Reference so that the security may be more or less volatile than the Reference, depending on the multiple. Consequently, structured securities may entail a greater degree of market risk and volatility than other types of debt obligations.

Swaps

The swap market has grown substantially in recent years with a large number of banks and investment banking firms acting both as principals and as agents utilizing standardized swap documentation. As a result, the swap market has become relatively liquid in comparison with the markets for other similar instruments that are traded in the over-the-counter market. The Adviser, under the supervision of the Board, is responsible for determining and monitoring the liquidity of the Fund's transactions in swap agreements. The use of equity swaps is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions.

Swap Agreements

Swap agreements are typically two-party, uncleared contracts entered into primarily by institutional investors for periods ranging from a day to more than one year. In a standard "swap" transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The gross returns to be exchanged or "swapped" between the parties are calculated with respect to a "notional amount," i.e., the return on or increase in value of a particular dollar amount invested in a "basket" of securities representing a particular index. Most swap agreements entered into by the Fund calculate the obligations of the parties to the agreement on a "net basis." Consequently, the Fund's current obligations (or rights) under a swap agreement will generally be equal only to the net amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the "net amount"). Payments may be made at the conclusion of a swap agreement or periodically during its term. Swap agreements often do not involve the delivery of securities or other underlying assets. Accordingly, if a swap is entered into on a net basis, if the other party to a swap agreement defaults, the Fund's risk of loss consists of the net amount of payments that the Fund is contractually entitled to receive, if any. The net amount of the excess, if any, of the Fund's obligations over its entitlements with respect to a swap agreement entered into on a net basis will be accrued daily and an amount of cash or liquid asset having an aggregate NAV at least equal to the accrued excess will be maintained in an account with the Fund's custodian that satisfies the 1940 Act. The Fund will also establish and maintain such accounts with respect to its total obligations under any swaps that are not entered into on a net basis. Obligations under swap agreements so covered will not be construed to be "senior securities" for purposes of the Fund's investment restriction concerning senior securities. Because most swap agreements are two-party contracts and may have terms of greater than seven days, swap agreements may be considered to be illiquid for the Fund's illiquid investment limitations. The Fund will not enter into any swap agreement unless the Adviser believes that the other party to the transaction is creditworthy. The Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty.

The Fund may enter into a swap agreement in circumstances where the Adviser believes that it may be more cost effective or practical than buying the underlying securities or a futures contract or an option on such securities. The counterparty to any swap agreement will typically be a bank, investment banking firm or broker/dealer. The counterparty will generally agree to pay the Fund the amount, if any, by which the notional amount of the swap agreement would have increased in value had it been invested in the particular stocks, futures contracts or other underlying assets represented in the index, plus the dividends that would have been received on those instruments. The Fund will agree to pay to the counterparty a floating rate of interest on the notional amount of the swap agreement plus the amount, if any, by which the notional amount would have decreased in value had it been invested in such stocks, futures contracts or other underlying assets. Therefore, the return to the Fund on any swap agreement should be the gain or loss on the notional amount plus dividends on the stocks less the interest paid by the Fund on the notional amount.

The Fund may enter into total return swap agreements. Total return swap agreements are contracts in which one party agrees to make periodic payments based on the change in market value of underlying assets, which may include a specified security, futures contract, basket of securities or futures contracts, defined portfolios of bonds, loans and mortgages, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security, commodity or market without owning or taking physical custody of such security, commodity or market. Total return swap agreements may effectively add leverage to the Fund's portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. Total return swaps are a mechanism for the user to accept the economic benefits of asset ownership without utilizing the balance sheet. The other leg of the swap, pegged to a floating rate (such as the London Interbank Offered Rate (LIBOR)), is spread to reflect the non-balance sheet nature of the product. Total return swaps can be designed with any underlying asset agreed between two parties. Typically, no notional amounts are exchanged with total return swaps. Total return swap agreements entail the risk that a party will default on its payment obligations to the Fund thereunder. Swap agreements also entail the risk that the Fund will not be able to meet their obligation to the counterparty. Generally, the Fund will enter into total return swaps on a net basis (*i.e.*, the two payment streams are netted out with the Fund receiving or paying, as the case may be, only the net amount of the two payments).

The swap market has grown substantially in recent years with a large number of banks and investment banking firms acting both as principals and as agents utilizing standardized documentation. As a result, the swap market has become relatively liquid in comparison with the markets for other similar instruments that are traded in the over-the-counter market. The Adviser, under the supervision of the Board, is responsible for determining and monitoring the liquidity of Fund's transactions in swap agreements. The use of equity swaps is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions.

Credit Default Swaps

In a credit default swap, one party makes a stream of payments to another party in exchange for the right to receive a specified return in the event of a default by a third party, typically an emerging country, on its obligation. The Fund may use credit default swaps to provide a measure of protection against defaults of sovereign issuers (*i.e.*, to reduce risk where the Fund own or have exposure to the sovereign issuer) and may use credit default swaps to take an active long or short position with respect to the likelihood of a particular issuer's default. In connection with these agreements, cash or liquid securities may be set aside as collateral by the custodian to the Fund in accordance with the terms of the swap agreement. The Fund earns interest on cash set aside as collateral. Swaps are marked to market daily based upon quotations from market makers and the change in value, if any, is recorded as unrealized gain or loss. These financial instruments are not actively traded on financial markets. The values assigned to these instruments are based upon the best available information and because of the uncertainty of the valuation, these values may differ significantly from the values that would have been realized had a ready market for these instruments existed, and the differences could be material. Payments received or made at the end of the measurement period are recorded as realized gain or loss. Entering into these agreements involves, to varying degrees, elements of credit, market, and documentation risk. Such risks involve the possibility that there will be no liquid market for these agreements, that the counterparty to the agreements may default on its obligation to perform or disagree as to the meaning of contractual terms in the agreements, and that there may be unfavorable changes in interest rates.

The Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") and related regulatory developments requires the clearing and exchange-trading of certain interest rate swaps and credit default swaps. The Dodd-Frank Act will ultimately require the clearing of many additional types of over the counter ("OTC") OTC derivative instruments that the CFTC and SEC recently defined as "swaps" including non-deliverable foreign (non-U.S.) exchange forwards, OTC foreign (non-U.S.) exchange options and swaptions. Mandatory exchange-trading and clearing will take place on a phased-in basis based on type of market participant and CFTC approval of contracts for central clearing. In addition, on a phased in basis, derivatives will be subject to margin requirements and swap dealers will potentially be required to collect margin from the Fund with respect to such derivatives. The Adviser will continue to monitor developments in this area, particularly to the extent regulatory changes affect the Fund's ability to enter into swap agreements.

Technology Risk

The Adviser or uses various technologies in managing the Fund, consistent with the Fund's investment objective and strategy described in the Fund's prospectus. For example, proprietary and third-party data and systems are utilized to support decision making for the Fund. Data imprecision, software or other technology malfunctions, programming inaccuracies and similar circumstances may impair the performance of these systems, which may negatively impact the Fund.

Temporary Defensive Position

In anticipation of or in response to adverse market, economic, political or other conditions, the Fund may temporarily invest up to 100% of its total assets, without limitation, in high-quality short-term debt securities, money market instruments, cash and/or cash equivalents. These short-term debt securities and money market instruments include: shares of money market mutual funds, commercial paper, certificates of deposit, bankers' acceptances, U.S. Government securities and repurchase agreements. While the Fund is in a temporary defensive position, the opportunity to achieve upside return may be limited and it may be unable for a time to achieve its investment objective.

Time Deposits and Variable Rate Notes

The Fund may invest in fixed time deposits, whether or not subject to withdrawal penalties. The commercial paper obligations which the Fund may buy are unsecured and may include variable rate notes. The nature and terms of a variable rate note (*i.e.*, a "Master Note") permit the Fund to invest fluctuating amounts at varying rates of interest pursuant to a direct arrangement between the Fund as lender, and the issuer, as borrower. It permits daily changes in the amounts borrowed. The Fund has the right at any time to increase, up to the full amount stated in the note agreement, or to decrease the amount outstanding under the note. The issuer may prepay at any time and without penalty any part of or the full amount of the note. The note may or may not be backed by one or more bank letters of credit. Because these notes are direct lending arrangements between the Fund and the issuer, it is not generally contemplated that they will be traded; moreover, there is currently no secondary market for them. Except as specifically provided in the Fund's prospectus, there is no limitation on the type of issuer from whom these notes may be purchased; however, in connection with such purchase and on an ongoing basis, the Adviser or Sub-Adviser will consider the earning power, cash flow and other liquidity ratios of the issuer, and its ability to pay principal and interest on demand, including a situation in which all holders of such notes made demand simultaneously. Variable rate notes are subject to the Fund's investment restriction on illiquid securities unless such notes can be put back to the issuer on demand within seven days.

Trading in Futures Contracts

A futures contract provides for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument (e.g., units of a stock index) for a specified price, date, time and place designated at the time the contract is made. Brokerage fees are incurred when a futures contract is bought or sold and margin deposits must be maintained. Entering into a contract to buy is commonly referred to as buying or purchasing a contract or holding a long position. Entering into a contract to sell is commonly referred to as selling a contract or holding a short position.

Unlike when the Fund purchases or sells a security, no price would be paid or received by the Fund upon the purchase or sale of a futures contract.

The margin required for a particular futures contract is set by the exchange on which the contract is traded and may be significantly modified from time to time by the exchange during the term of the contract. Futures contracts are customarily purchased and sold on margins that may range upward from less than 5% of the value of the contract being traded.

If the price of an open futures contract changes (by increase in underlying instrument or index in the case of a sale or by decrease in the case of a purchase) so that the loss on the futures contract reaches a point at which the margin on deposit does not satisfy margin requirements, the broker will require an increase in the margin. However, if the value of a position increases because of favorable price changes in the futures contract so that the margin deposit exceeds the required margin, the broker will pay the excess to the Fund.

These subsequent payments, called "variation margin," to and from the futures broker, are made on a daily basis as the price of the underlying assets fluctuate making the long and short positions in the futures contract more or less valuable, a process known as "marking to the market." The Fund expects to earn interest income on its margin deposits.

Although certain futures contracts, by their terms, require actual future delivery of and payment for the underlying instruments, in practice most futures contracts are usually closed out before the delivery date. Closing out an open futures contract purchase or sale is effected by entering into an offsetting futures contract sale or purchase, respectively, for the same aggregate amount of the identical underlying instrument or index and the same delivery date. If the offsetting purchase price is less than the original sale price, the Fund realizes a gain; if it is more, the Fund realizes a loss. Conversely, if the offsetting sale price is more than the original purchase price, the Fund realizes a gain; if it is less, the Fund realizes a loss. The transaction costs must also be included in these calculations. There can be no assurance, however, that the Fund will be able to enter into an offsetting transaction with respect to a particular futures contract at a particular time. If the Fund is not able to enter into an offsetting transaction, the Fund will continue to be required to maintain the margin deposits on the futures contract.

For example, one contract in the Financial Times Stock Exchange 100 Index future is a contract to buy 25 pounds sterling multiplied by the level of the UK Financial Times 100 Share Index on a given future date. Settlement of a stock index futures contract may or may not be in the underlying instrument or index. If not in the underlying instrument or index, then settlement will be made in cash, equivalent

over time to the difference between the contract price and the actual price of the underlying asset at the time the stock index futures contract expires.

The Fund's futures contracts may be subject to periods of illiquidity because of market conditions, regulatory considerations and other reasons. For example, commodity exchanges limit fluctuations in certain futures contract prices during a single day by regulations referred to as "daily limits." During a single day, no trades may be executed at prices beyond the daily limit. Once the price of a futures contract for a particular commodity has increased or decreased by an amount equal to the daily limit, positions in the commodity futures contracts can neither be taken nor liquidated unless the traders are willing to effect trades at or within the limit. Futures contract prices have occasionally moved the daily limit for several consecutive days with little or no trading. Such market conditions could prevent the Fund from promptly liquidating its futures contracts.

United States Government Agency

The Fund may invest in securities issued by United States Government Agencies. These consist of fixed income securities issued by agencies and instrumentalities of the United States Government, including the various types of instruments currently outstanding or which may be offered in the future. Agencies include, among others, the Federal Housing Administration, Government National Mortgage Association ("GNMA"), Export-Import Bank of the United States, Maritime Administration, and General Services Administration. Instrumentalities include, for example, each of the Federal Home Loan Banks, the National Bank for Cooperatives, the Federal Home Loan Mortgage Corporation ("FHLMC"), the Farm Credit Banks, the Federal National Mortgage Association ("FNMA"), and the United States Postal Service. These securities are either: (i) backed by the full faith and credit of the United States government (e.g., United States Treasury Bills); (ii) guaranteed by the United States Treasury (e.g., GNMA mortgage-backed securities); (iii) supported by the issuing agency's or instrumentality's right to borrow from the United States Treasury (e.g., FNMA Discount Notes); or (iv) supported only by the issuing agency's or instrumentality's own credit (e.g., Tennessee Valley Association).

Government-related guarantors (i.e., not backed by the full faith and credit of the United States Government) include FNMA and FHLMC. FNMA is a government-sponsored corporation owned entirely by private stockholders. It is subject to general regulation by the Secretary of Housing and Urban Development. FNMA purchases conventional (i.e., not insured or guaranteed by any government agency) residential mortgages from a list of approved seller/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks and credit unions and mortgage bankers. Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA but are not backed by the full faith and credit of the United States Government.

FHLMC was created by Congress in 1970 for the purpose of increasing the availability of mortgage credit for residential housing. It is a government-sponsored corporation formerly owned by the twelve Federal Home Loan Banks and now owned entirely by private stockholders. FHLMC issues Participation Certificates ("PC's"), which represent interests in conventional mortgages from FHLMC's national portfolio. FHLMC guarantees the timely payment of interest and ultimate collection of principal, but PCs are not backed by the full faith and credit of the United States Government. Commercial banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers and other secondary market issuers also create pass-through pools of conventional residential mortgage loans. Such issuers may, in addition, be the originators and/or servicers of the underlying mortgage loans as well as the guarantors of the mortgage-related securities. Pools created by such nongovernmental issuers generally offer a higher rate of interest than government and government-related pools because there are no direct or indirect government or agency guarantees of payments in the former pools. However, timely payment of interest and principal of these pools may be supported by various forms of insurance or guarantees, including individual loan, title, pool and hazard insurance and letters of credit. The insurance and guarantees are issued by governmental entities, private insurers and the mortgage poolers.

United States Government Obligations

The Fund may invest in United States Government Obligations. These consist of various types of marketable securities issued by the United States Treasury, i.e., bills, notes and bonds. Such securities are direct obligations of the United States government and differ mainly in the length of their maturity. Treasury bills, the most frequently issued marketable government security, have a maturity of up to one year and are issued on a discount basis.

Receipts

Interests in separately traded interest and principal component parts of U.S. government obligations that are issued by banks or brokerage firms and are created by depositing U.S. government obligations into a special account at a custodian bank. The custodian holds the interest and principal payments for the benefit of the registered owners of the certificates or receipts. The custodian arranges for the issuance of the certificates or receipts evidencing ownership and maintains the register. Treasury Receipts ("TRs") and Separately Traded Registered Interest and Principal Securities ("STRIPS") are interests in accounts sponsored by the U.S. Treasury. Receipts are sold as zero coupon securities.

U.S. Government Zero Coupon Securities

STRIPS and receipts are sold as zero coupon securities, that is, fixed income securities that have been stripped of their unmatured interest coupons. Zero coupon securities are sold at a (usually substantial) discount and redeemed at face value at their maturity date without interim cash payments of interest or principal. The amount of this discount is accreted over the life of the security, and the accretion constitutes the income earned on the security for both accounting and tax purposes. Because of these features, the market prices of zero coupon securities are generally more volatile than the market prices of securities that have similar maturity but that pay interest periodically. Zero coupon securities are likely to respond to a greater degree to interest rate changes than are non-zero coupon securities with similar maturity and credit qualities.

U.S. Treasury Obligations

U.S. Treasury obligations consist of bills, notes and bonds issued by the U.S. Treasury and separately traded interest and principal component parts of such obligations that are transferable through the federal book-entry system known as STRIPS and TRs.

Warrants

Warrants are options to purchase common stock at a specific price (usually at a premium above the market value of the optioned common stock at issuance) valid for a specific period of time. Warrants may have a life ranging from less than one year to twenty years, or they may be perpetual. However, most warrants have expiration dates after which they are worthless. In addition, a warrant is worthless if the market price of the common stock does not exceed the warrant's exercise price during the life of the warrant. Warrants have no voting rights, pay no dividends, and have no rights with respect to the assets of the corporation issuing them. The percentage increase or decrease in the market price of the warrant may tend to be greater than the percentage increase or decrease in the market price of the optioned common stock.

When-Issued, Forward Commitments and Delayed Settlements

The Fund may purchase and sell securities on a when-issued, forward commitment or delayed settlement basis.

The Fund does not intend to engage in these transactions for speculative purposes but only in furtherance of its investment objectives.

The Fund will purchase securities on a when-issued, forward commitment or delayed settlement basis only with the intention of completing the transaction. If deemed advisable as a matter of investment strategy, however, the Fund may dispose of or renegotiate a commitment after it is entered into, and may sell securities it has committed to purchase before those securities are delivered to the Fund on the settlement date. In these cases, the Fund may realize a taxable capital gain or loss. When the Fund engages in when-issued, forward commitment and delayed settlement transactions, it relies on the other party to consummate the trade. Failure of such party to do so may result in the Fund incurring a loss or missing an opportunity to obtain a price credited to be advantageous.

The market value of the securities underlying a when-issued purchase, forward commitment to purchase securities, or a delayed settlement and any subsequent fluctuations in their market value is taken into account when determining the market value of the Fund starting on the day the Fund agrees to purchase the securities. The Fund does not earn interest on the securities it has committed to purchase until it has paid for and delivered on the settlement date.

INVESTMENT RESTRICTIONS

The Fund has adopted the following fundamental investment restrictions that may not be changed without approval by a “majority of the outstanding shares” of the Fund which, as used in this SAI, means the vote of the lesser of (a) 67% or more of the shares of the Fund represented at a meeting, if the holders of more than 50% of the outstanding shares of the Fund are present or represented by proxy, or (b) more than 50% of the outstanding shares of the Fund. The Fund may not:

1. Issue senior securities, except as otherwise permitted under the 1940 Act, and the rules and regulations promulgated thereunder;
2. Borrow money, except (a) from a bank, provided that immediately after such borrowing there is an asset coverage of 300% for all borrowings of the Fund; or (b) from a bank or other persons for temporary purposes only, provided that such temporary borrowings are in an amount not exceeding 5% of the Fund’s total assets at the time when the borrowing is made. This limitation does not preclude the Fund from entering into reverse repurchase transactions, provided that the Fund has an asset coverage of 300% for all borrowings and repurchase commitments of the Fund pursuant to reverse repurchase transactions;
3. Purchase securities on margin, participate on a joint or joint and several basis in any securities trading account, or underwrite securities. (Does not preclude the Fund from obtaining such short-term credit as may be necessary for the clearance of purchases and sales of its portfolio securities, and except to the extent that the Fund may be deemed an underwriter under the Securities Act, by virtue of disposing of portfolio securities);
4. Purchase or sell real estate or interests in real estate. This limitation is not applicable to investments in marketable securities that are secured by or represent interests in real estate. This limitation does not preclude the Fund from investing in mortgage-related securities or investing in companies engaged in the real estate business or that have a significant portion of their assets in real estate (including real estate investment trusts);
5. Concentrate its investments in a particular industry, as that term is used in the 1940 Act;
6. Purchase or sell commodities (unless acquired as a result of ownership of securities or other investments) or commodity futures contracts, except that the Fund may purchase and sell futures contracts and options to the full extent permitted under the 1940 Act, sell foreign currency contracts in accordance with any rules of the Commodity Futures Trading Commission, invest in securities or other instruments backed by commodities, and invest in companies that are engaged in a commodities business or have a significant portion of their assets in commodities; or
7. Make loans to others, except that the Fund may, in accordance with its investment objective and policies, (i) lend portfolio securities, (ii) purchase and hold debt securities or other debt instruments, including but not limited to loan participations and sub-participations, assignments, and structured securities, (iii) make loans secured by mortgages on real property, (iv) enter into repurchase agreements, (v) enter into transactions where each loan is represented by a note executed by the borrower, and (vi) make time deposits with financial institutions and invest in instruments issued by financial institutions. For purposes of this limitation, the term "loans" shall not include the purchase of a portion of an issue of publicly distributed bonds, debentures or other securities.

If a restriction on the Fund’s investments is adhered to at the time an investment is made, a subsequent change in the percentage of Fund assets invested in certain securities or other instruments of the Fund’s investment portfolio, resulting from changes in the value of the Fund’s total assets, will not be considered a violation of the restriction; provided, however, that the asset coverage requirement applicable to borrowings shall be maintained in the manner contemplated by applicable law.

With respect to fundamental investment limitation 2 above, if the Fund’s asset coverage falls below 300%, the Fund will reduce borrowing within 3 days in order to ensure that the Fund has 300% asset coverage.

With respect to the fundamental policy relating to concentration set forth in (5) above, the 1940 Act does not define what constitutes “concentration” in an industry. The SEC staff has taken the position that investment of 25% or more of a fund’s total assets in one or more issuers conducting their principal activities in the same industry or group of industries constitutes concentration. It is possible that interpretations of concentration could change in the future. The policy in (5) above will be interpreted to refer to concentration as that term may be interpreted from time to time. The policy also will be interpreted to permit investment without limit in the following: securities of the U.S. government and its agencies or instrumentalities; securities of state, territory, possession or municipal governments and their authorities, agencies, instrumentalities or political subdivisions; and repurchase agreements collateralized by any such obligations. Accordingly, issuers of the foregoing securities will not be considered to be members of any industry. There also will be no limit on investment in issuers domiciled in a single jurisdiction or country. Finance companies will be considered to be in the industries of their parents if their activities are primarily related to financing the activities of the parents. Each foreign government will be considered to be a member of a separate industry. With respect to the Fund’s industry classifications, the Fund currently utilize any one or more of the industry sub-classifications used by one or more widely recognized market indexes or rating group indexes, and/or as defined by Fund management. The Fund’s investment adviser may analyze the characteristics of a particular issuer and security and

assign an industry classification consistent with those characteristics in the event that either a third-party classification provider used by the investment adviser or another Fund service provider does not assign a classification or assigns a classification inconsistent with that believed appropriate by the investment adviser based on its analysis of the economic characteristics of the issuer. With respect to the fundamental policy relating to concentration set forth in (5) above, if the Fund invests in one or more investment companies that concentrates its investments in a particular industry, the Fund will examine its other investment company holdings to ensure that the Fund is not indirectly concentrating its investments in a particular industry.

POLICIES AND PROCEDURES FOR DISCLOSURE OF PORTFOLIO HOLDINGS

The Trust has adopted policies and procedures that govern the disclosure of the Fund's portfolio holdings. These policies and procedures are designed to ensure that such disclosure is in the best interests of the Fund's shareholders.

It is the Trust's policy to: (1) ensure that any disclosure of portfolio holdings information is in the best interest of Trust shareholders; (2) protect the confidentiality of portfolio holdings information; (3) have procedures in place to guard against personal trading based on the information; and (4) ensure that the disclosure of portfolio holdings information does not create conflicts between the interests of the Trust's shareholders and those of the Trust's affiliates.

The Fund discloses its portfolio holdings by mailing its annual and semi-annual reports to shareholders approximately two months after the end of the fiscal year and semi-annual period. In addition, the Fund discloses its portfolio holdings reports on Form N-CSR and Form N-PORT two months after the end of each quarter/semi-annual period.

The Fund may choose to make portfolio holdings available to rating agencies such as Lipper, Morningstar or Bloomberg earlier and more frequently on a confidential basis.

Under limited circumstances, as described below, the Fund's portfolio holdings may be disclosed to, or known by, certain third parties in advance of their filing with the SEC on Form N-CSR or Form N-PORT. In each case, a determination has been made by the Trust's Chief Compliance Officer that such advance disclosure is supported by a legitimate business purpose and that the recipient is subject to a duty to keep the information confidential.

- **The Adviser.** Personnel of the Adviser, including personnel responsible for managing the Fund's portfolio, may have full daily access to the Fund's portfolio holdings since that information is necessary in order for the Adviser to provide its management, administrative, and investment services to the Fund. As required for purposes of analyzing the impact of existing and future market changes on the prices, availability, demand and liquidity of such securities, as well as for the assistance of the portfolio managers in the trading of such securities, Adviser personnel may also release and discuss certain portfolio holdings with various broker-dealers.

- **Ultimus Fund Solutions, LLC** is the transfer agent, fund accountant, administrator and custody administrator for the Fund; therefore, its personnel have full daily access to the Fund's portfolio holdings since that information is necessary in order for them to provide the agreed-upon services for the Trust.

- **U.S. Bank, N.A.** is custodian for the Fund; therefore, its personnel have full daily access to the Fund's portfolio holdings since that information is necessary in order for them to provide the agreed-upon services for the Trust.

- **Cohen & Company, Ltd.** is the Fund's independent registered public accounting firm; therefore, its personnel have access to the Fund's portfolio holdings in connection with auditing of the Fund's annual financial statements and preparation of the Fund's tax returns.

- **Blank Rome LLP** is counsel to the Fund; therefore, its personnel have access to the Fund's portfolio holdings in connection with review of the Fund's annual and semi-annual shareholder reports and SEC filings.

Additions to List of Approved Recipients. The Trust's Chief Compliance Officer is the person responsible, and whose prior approval is required, for any disclosure of the Fund's portfolio securities at any time or to any persons other than those described above. In such cases, the recipient must have a legitimate business need for the information in connection with the operation or administration of the Fund, as determined by the Trust's Chief Compliance Officer and must be subject to a duty to keep the information confidential. There are no ongoing arrangements in place with respect to the disclosure of portfolio holdings. In no event shall the Fund, the Adviser or any other party receive any direct or indirect compensation in connection with the disclosure of information about the Fund's portfolio holdings.

Compliance with Portfolio Holdings Disclosure Procedures. The Trust's Chief Compliance Officer will report periodically to the Board with respect to compliance with the Fund's portfolio holdings disclosure procedures, and from time to time will provide the Board any updates to the portfolio holdings disclosure policies and procedures.

There is no assurance that the Trust's policies on disclosure of portfolio holdings will protect the Fund from the potential misuse of holdings information by individuals or firms in possession of that information.

MANAGEMENT

The business of the Trust is managed under the direction of the Board in accordance with the Agreement and Declaration of Trust and the Trust's By-laws (collectively, the "Governing Documents"), which have been filed with the SEC and are available upon request. The Board consists of four individuals, all of whom are not "interested persons" (as defined under the 1940 Act) of the Trust and the Adviser ("Independent Trustees"). Pursuant to the Governing Documents of the Trust, the Trustees shall elect officers including, but not limited to, a President, a Secretary, a Treasurer, and a Chief Compliance Officer. The Board retains the power to conduct, operate and carry on the business of the Trust and has the power to incur and pay any expenses, which, in the opinion of the Board, are necessary or incidental to carry out any of the Trust's purposes. The Trustees, officers, employees and agents of the Trust, when acting in such capacities, shall not be subject to any personal liability except for his or her own bad faith, willful misfeasance, gross negligence or reckless disregard of his or her duties.

Board Leadership Structure. The Board is led by Mark Gersten, who has served as the Chairman of the Board since the Trust was first registered with the SEC in 2012. Under the Trust's Agreement and Declaration of Trust and By-Laws, the Chairman of the Board is responsible for (a) presiding at Board meetings, (b) calling special meetings on an as-needed basis, and (c) execution and administration of Trust policies, including (i) setting the agendas for Board meetings and (ii) providing information to Board members in advance of each Board meeting and between Board meetings. Generally, the Trust believes it best to have a non-executive Chairman of the Board, who together with the President (principal executive officer), are seen by our shareholders, business partners and other stakeholders as providing strong leadership. The Trust believes that its Chairman, the independent chair of the Audit Committee, and, as an entity, the full Board of Trustees, provide effective leadership that is in the best interests of the Trust, its series and each shareholder.

Board Risk Oversight. The Board of Trustees is comprised entirely of Independent Trustees and has established an Audit Committee with a separate chair. The Board is responsible for overseeing risk management, and the full Board regularly engages in discussions of risk management and receives compliance reports that inform its oversight of risk management from its Chief Compliance Officer at quarterly meetings and on an ad hoc basis, when and if necessary. The Audit Committee considers financial and reporting risk within its area of responsibilities. Generally, the Board believes that its oversight of material risks is adequately maintained through the compliance-reporting chain where the Chief Compliance Officer is the primary recipient and communicator of such risk-related information.

Trustee Qualifications. Generally, the Trust believes that each Trustee is competent to serve because of their individual overall merits including: (i) experience, (ii) qualifications, (iii) attributes and (iv) skills. Mark Garbin has over 30 years of experience in corporate balance sheet and income statement risk management for large asset managers. Mr. Garbin has extensive derivatives experience and has provided consulting services to alternative asset managers. Mr. Garbin holds both a Chartered Financial Analyst ("CFA") and Professional Risk Manager ("PRM") designation and has earned and holds advanced degrees in international business, negotiation and derivatives. Mark Gersten has over 35 years of business experience in the investment management business with a focus on mutual funds and alternative funds. He serves as a member of other mutual fund boards outside of the Fund Complex and possesses a strong understanding of the regulatory framework under which investment companies must operate based on his service to this board and extensive experience administering mutual funds. Mr. Gersten is a certified public accountant and holds an MBA in accounting. Neil Kaufman has over 35 years of experience as a corporate and securities attorney and possesses a deep understanding of the securities industry in general and financial statements in particular. Mr. Kaufman has previously served as the Chairman of a NASDAQ-listed technology company and the Chairman of the Banking & Securities Law committee of the Nassau County Bar Association. Anita Krug has 9 years of experience as an attorney advising investment companies and investment advisory firms, particularly those managing hedge funds. She also has extensive experience as a law professor whose scholarship focuses on investment advisers, hedge funds and mutual funds. The Trust does not believe any one factor is determinative in assessing a Trustee's qualifications, but that the collective experience of each Trustee makes them well qualified.

Trustees and Officers. The Trustees and officers of the Trust, together with information as to their principal business occupations during the past five years and other information, are shown below. The business address of each Trustee and Officer is 225 Pictoria Drive, Suite 450, Cincinnati, OH 45246.

* Information is as of July 31, 2023.

** As of July 31, 2023, the Trust was comprised of 26 active portfolios managed by nine unaffiliated investment advisers and two affiliated investment advisers. The term “Fund Complex” applies only to those funds that (i) are advised by a common investment adviser or by an investment adviser that is an affiliated person of the investment adviser of any of the other funds in the Trust or (ii) hold themselves out to investors as related companies for purposes of investment and investor services. The Fund does not share the same investment adviser with any other series of the Trust or hold itself out as related to any other series within the Trust.

Audit Committee. The Board has an Audit Committee that consists of all of the Trustees, none of whom is an “interested person” of the Trust within the meaning of the 1940 Act. The Audit Committee’s responsibilities include, among other things: (i) the selection, retention or termination of the Trust’s independent auditors and approval of audit and non-audit services to be provided by the independent auditors; (ii) reviewing with the independent auditors the scope, performance and anticipated cost of their audit; (iii) discussing with the independent auditors certain matters relating to the Trust’s financial statements, including any adjustment to such financial statements recommended by such independent auditors, or any other results of any audit; (iv) reviewing on a periodic basis a formal written statement from the independent auditors with respect to their independence, discussing with the independent auditors any relationships or services disclosed in the statement that may impact the objectivity and independence of the Trust’s independent auditors and recommending that the Board take appropriate action in response thereto to satisfy itself of the auditor’s independence; and (v) considering the comments of the independent auditors and management’s responses thereto with respect to the quality and adequacy of the Trust’s accounting and financial reporting policies and practices and internal controls. The Audit Committee operates pursuant to an Audit Committee Charter. During the fiscal year ended July 31, 2023, the Audit Committee held eight meetings.

Compensation of Trustees. Effective January 1, 2022, the Trust pays each Independent Trustee a fee of \$75,000 per annum, as well as reimbursements for any reasonable expenses incurred attending the meetings, to be paid at the end of each calendar quarter. In addition, the Chairman of the Board receives an additional annual fee of \$20,000 and the Chairman of the Audit Committee receives an additional annual fee of \$15,000. The Trust also pays each Independent Trustee a fee of \$1,000 for each Board meeting (and/or Committee meeting held in connection with such a Board meeting) other than a regularly scheduled meeting (a “Special Meeting”), except that the Audit Committee will permit up to four Special Meetings a year without any additional fees.

Prior to January 1, 2022, the Trust paid each Independent Trustee a fee of \$50,000 per annum, as well as reimbursements for any reasonable expenses incurred attending the meetings, to be paid at the end of each calendar quarter. In addition, the Chairman of the Board received an additional annual fee of \$12,500 and the Chairman of the Audit Committee received an additional annual fee of \$10,000.

No “interested person” who serves as a Trustee of the Trust will receive any compensation for their services as Trustee. None of the executive officers receive compensation from the Trust. The Trust does not have a bonus, profit sharing, deferred compensation, pension or retirement plan.

The table below details the amount of compensation the Trustees received from the Fund Complex during the fiscal year ended July 31, 2023.*

Name and Position	Aggregate Compensation From Hunter Small Cap Value Fund	Total Compensation From Fund Complex Paid to Trustees**
Mark Garbin	\$2,125.96	\$2,125.96
Mark Gersten	\$2,678.34	\$2,678.34
Neil Kaufman	\$2,609.13	\$2,609.13
Anita Krug	\$2,125.96	\$2,125.96

* The Trust is comprised of multiple series with differing fiscal year ends. The compensation paid to the Board of Trustees is determined on a calendar quarter basis.

** As of July 31, 2023, the Trust was comprised of 26 active portfolios managed by 9 unaffiliated investment advisers and 2 affiliated advisers. The term “Fund Complex” refers only to the Fund, and not to any other series of the Trust. For the fiscal year ended July 31, 2023, the aggregate Independent Trustees’ fees paid by the entire Trust were \$335,000. Trustees’ fees are allocated equally to each series of the Trust.

Trustees’ Ownership of Shares in the Fund. As of December 31, 2022, the Trustees beneficially owned the following amounts in the Fund and the family of investment companies overseen by the Trustees:

Name of Trustee	Dollar Range of Equity Securities in the Hunter Small Cap Value Fund	Aggregate Dollar Range of Equity Securities in All Registered Investment Companies Overseen by Trustee in Family of Investment Companies*
Mark Garbin	None	\$10,001-50,000
Mark Gersten	None	\$10,001 – 50,000
Neil Kaufman	None	\$50,000-100,000
Anita Krug	None	None

*Refers to all series of the Trust.

Management Ownership

As of July 31, 2023, the Trustees and officers, as a group, owned less than 1% of the Fund’s outstanding shares.

CONTROL PERSONS AND PRINCIPAL HOLDERS

A principal shareholder is any person who owns of record or beneficially 5% or more of the outstanding shares of the Fund. A control person is one who owns beneficially or through controlled companies more than 25% of the voting securities of a company or acknowledges the existence of control.

As of November 3, 2023:

Charles Schwab & Co. 211 Main Street San Francisco, CA 94105	91.90%

INVESTMENT ADVISER

Investment Adviser and Investment Advisory Agreement

Hunter Perkins Capital Management, LLC d/b/a Hunter Capital Management (“Hunter” or the “Adviser”), located at 377 E. Butterfield Road, Suite 220 Lombard, IL 60148, serves as investment adviser to the Fund. Subject to the authority of the Board of Trustees, Hunter is responsible for the overall management of the Fund’s business affairs. The Adviser is controlled, and majority owned, by trusts that are controlled by Alec Perkins and Bob Perkins.

The Adviser, subject to the supervision of the Board, agrees to invest the assets of the Fund in accordance with applicable law and the investment objective, policies and restrictions set forth in the Prospectus and Statement of Additional Information, and subject to such further limitations as the Trust may from time to time impose by written notice to the Adviser. The Adviser shall act as the investment

adviser to the Fund and, as such shall (i) obtain and evaluate such information relating to the economy, industries, business, securities markets and securities as it may deem necessary or useful in discharging its responsibilities under the Advisory Agreement, (ii) formulate a continuing program for the investment of the assets of the Fund in a manner consistent with its investment objective, policies and restrictions, and (iii) determine from time to time securities to be purchased, sold, retained or lent by the Fund, and implement those decisions, including the selection of entities with or through which such purchases, sales or loans are to be effected; provided, that the Adviser will place orders pursuant to its investment determinations either directly with the issuer or with a broker or dealer, and if with a broker or dealer, (a) will attempt to obtain the best price and execution of its orders, and (b) may nevertheless in its discretion purchase and sell portfolio securities from and to brokers who provide the Adviser with research, analysis, advice and similar services and pay such brokers in return a higher commission or spread than may be charged by other brokers subject to best execution. The Adviser also provides necessary office facilities and personnel for servicing the Fund’s investments, compensates all officers, Trustees and employees of the Trust who are officers, directors or employees of the Adviser, and all personnel of the Fund or the Adviser performing services relating to research, statistical and investment activities. The Investment Advisory Agreement with respect to the Fund was initially approved by the Board, including a majority of the Independent Trustees, at a meeting held on December 7, 2022.

The following table sets forth the annual management fee rate payable by the Fund to the Adviser pursuant to the Investment Advisory Agreement, expressed as a percentage of the Fund’s average daily net assets:

FUND	ADVISORY FEE
Hunter Small Cap Value Fund	0.95%

For its services to the Fund, the Adviser is entitled to receive an annual fee equal to the percentages of the Fund’s average daily net assets in the table above. In addition to investment advisory fees, the Fund pays other expenses including costs incurred in connection with the maintenance of its securities law registration, printing and mailing prospectuses and Statements of Additional Information to shareholders, certain financial accounting services, taxes or governmental fees, custodial, transfer and shareholder servicing agent costs, expenses of outside counsel and independent accountants, preparation of shareholder reports and expenses of trustee and shareholders meetings. The fee is computed daily and payable monthly.

The Adviser has agreed contractually to waive fees and/or to reimburse expenses, other than expenses relating to acquired fund fees and expenses or extraordinary or non-recurring expenses, at least until November 30, 2024 such that net annual fund operating expenses of the Fund does not exceed the percentages in the table below, expressed as a percentage of average daily net assets of the Fund. This agreement may be terminated by the Board on 60 days’ written notice to the Adviser. Waiver/reimbursement is subject to possible recoupment from the Fund in future years on a rolling three-year basis (within three years after the fees have been waived or reimbursed) if such recoupment can be achieved within the below expense limits as well as any expense limitation that was in effect at the time the reimbursement was made. No recoupment amount will be paid to the Adviser in any fiscal quarter unless the Trust’s Board of Trustees has determined in advance that a recoupment is in the best interest of the Fund and its shareholders. Fee waiver and reimbursement arrangements can decrease the Fund’s expenses and increase its performance.

Fund	Expense Cap	Minimum Duration
Hunter Small Cap Value Fund	0.95%	November 30, 2024

The Expense Cap in effect prior to November 30, 2023 was 1.25%. Expenses not expressly assumed by the Adviser under the Investment Advisory Agreement are paid by the Fund. Under the terms of the Investment Advisory Agreement, the Fund is responsible for the payment of the following expenses among others: (a) the fees payable to the Adviser, (b) the fees and expenses of Trustees who are not affiliated persons of the Adviser or Distributor (as defined under the section entitled “The Distributor”), (c) the fees and certain expenses of the Custodian (as defined under the section entitled “Custodian”) and Transfer and Dividend Disbursing Agent (as defined under the section entitled “Transfer Agent”), including the cost of maintaining certain required records of the Fund and of pricing the Fund’s shares, (d) the charges and expenses of legal counsel and independent accountants for the Fund, (e) brokerage commissions and any issue or transfer taxes chargeable to the Fund in connection with its securities transactions, (f) all taxes and corporate fees payable by the Fund to governmental agencies, (g) the fees of any trade association of which the Fund may be a member, (h) the cost of share certificates representing shares of the Fund, (i) the cost of fidelity and liability insurance, (j) the fees and expenses involved in registering and maintaining registration of the Fund and of shares with the SEC, qualifying its shares under state securities laws, including the preparation and printing of the Fund’s registration statements and prospectuses for such purposes, (k) all expenses of shareholders and Trustees’ meetings (including travel expenses of trustees and officers of the Trust who are directors, officers or employees of the Adviser) and of preparing, printing and mailing reports, proxy statements and prospectuses to shareholders in the amount necessary for distribution to the shareholders and (l) litigation and indemnification expenses and other extraordinary expenses not incurred in the ordinary course of the Fund’s business.

With respect to the Fund, the Investment Advisory Agreement will continue in effect for two years initially and thereafter shall continue from year to year provided such continuance is approved at least annually by (a) a vote of the majority of the Independent Trustees, cast in person at a meeting specifically called for the purpose of voting on such approval and by (b) the majority vote of either all of the Trustees or the vote of a majority of the outstanding shares of the Fund. The Agreement may be terminated without penalty on 60 days' written notice by a vote of a majority of the Trustees, the Adviser, or by holders of a majority of the Fund's outstanding shares. The Agreement shall terminate automatically in the event of its assignment.

The table below provides information about the advisory fees paid to the Adviser by the Fund for the fiscal period ended July 31, 2023:

Fiscal Year	Management Fee	Fees Earned by the Adviser	Advisory Fees Waived	Net Fees Earned by the Adviser	Expense Reimbursed	Amount Subject to Recoupment
July 31, 2023 ⁽¹⁾	0.95%	\$104,665	\$104,665	\$0	\$16,458	\$121,123

(1) Reflects the period from Fund's commencement on December 28, 2022 through July 31, 2023.

Codes of Ethics

The Trust, the Adviser and the Distributor each have adopted codes of ethics under Rule 17j-1 under the 1940 Act that governs the personal securities transactions of their board members, officers and employees who may have access to current trading information of the Trust. Under the code of ethics adopted by the Trust (the "Code"), the Trustees are permitted to invest in securities that may also be purchased by the Fund.

In addition, the Trust has adopted a separate code of ethics that applies only to the Trust's executive officers to ensure that these officers promote professional conduct in the practice of corporate governance and management. The purpose behind these guidelines is to promote (i) honest and ethical conduct, including the ethical handling of actual or apparent conflicts of interest between personal and professional relationships; (ii) full, fair, accurate, timely, and understandable disclosure in reports and documents that a registrant files with, or submits to, the SEC and in other public communications made by the Fund; (iii) compliance with applicable governmental laws, rule and regulations; (iv) the prompt internal reporting of violations of this Code to an appropriate person or persons identified in the Code; and (v) accountability for adherence to the Code.

Proxy Voting Policies

The Board has adopted Proxy Voting Policies and Procedures ("Policies") on behalf of the Trust, which delegate the responsibility for voting proxies to the Adviser, subject to the Board's continuing oversight. The Policies require that the Adviser vote proxies received in a manner consistent with the best interests of the Fund and its shareholders. The Policies also require the Adviser to present to the Board, at least annually, the Adviser's Proxy Policies and a record of each proxy voted by the Adviser on behalf of the Fund, including a report on the resolution of all proxies identified by the Adviser as involving a conflict of interest.

Where a proxy proposal raises a material conflict between the Adviser's interests and the Fund's interests, the Adviser will resolve the conflict by voting in accordance with the policy guidelines or at the client's directive using the recommendation of an independent third party. If the third party's recommendations are not received in a timely fashion, the Adviser will abstain from voting the securities held by that client's account. A copy of the Adviser's proxy voting policies is attached hereto as Appendix A.

More information. Information regarding how the Fund voted proxies relating to portfolio securities during the most recent 12-month period ended June 30 is available (1) without charge, upon request, by calling 1-833-835-1171; and (2) on the SEC's website at <http://www.sec.gov> and will be sent within three business days of receipt of a request.

THE DISTRIBUTOR

Northern Lights Distributors, LLC, located at 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022-3474 (the "Distributor") serves as the principal underwriter and national distributor for the shares of the Fund pursuant to an Underwriting Agreement with the Trust (the "Underwriting Agreement"). The Distributor is registered as a broker-dealer under the Securities Exchange Act of 1934 and each state's securities laws and is a member of FINRA. The offering of the Fund's shares is continuous. The Underwriting Agreement provides that the Distributor, as agent in connection with the distribution of Fund shares, will use reasonable efforts to facilitate the sale of the Fund's shares.

The Underwriting Agreement provides that, unless sooner terminated, it will continue in effect for two years initially and thereafter shall continue from year to year, subject to annual approval by (a) the Board or a vote of a majority of the outstanding shares, and (b) by a majority of the Trustees who are not interested persons of the Trust or of the Distributor by vote cast in person at a meeting called for the purpose of voting on such approval.

The Underwriting Agreement may be terminated by the Fund at any time, without the payment of any penalty, by vote of a majority of the entire Board of the Trust or by vote of a majority of the outstanding shares of the Fund on 60 days' written notice to the Distributor, or by the Distributor at any time, without the payment of any penalty, on 60 days' written notice to the Fund. The Underwriting Agreement will automatically terminate in the event of its assignment.

PORTFOLIO MANAGERS

The tables below include details about the type, number, and assets under management for the various types of accounts, and total assets in the accounts with respect to which the advisory fee is based on the performance of the accounts. The information is as of July 31, 2023.

Alec Perkins

Account Type Investment Team	Number of Accounts by Account Type	Total Assets By Account Type	Number of Accounts by Type Subject to a Performance Fee	Total assets By Account Type Subject to a Performance Fee
Registered Investment Companies	1	\$25.8 million	0	\$0
Other Pooled Investment Vehicles	1	\$40.2 million	29	\$40.2 million
Other Accounts	177	\$625.49 million	0	\$0

Registered Investment Companies	1	\$25.8 million	0	\$0
Other Pooled Investment Vehicles	1	\$40.2 million	29	\$40.2 million
Other Accounts	177	\$625.49 million	0	\$0

Conflicts of Interest

The Adviser manages assets for other pooled investment vehicles and/or other accounts. Accordingly, potential conflicts of interest may be present. For example, the Adviser may receive fees from certain accounts that are higher than the fees received from the Fund, or receive a performance-based fee on certain accounts. In those instances, a portfolio manager has an incentive to favor the higher and/or performance-based fee accounts over the Fund. In addition, to the extent that the Fund's Portfolio Manager seeks to purchase or sell the same security for multiple client accounts and the order is only partially filled, the Adviser has an incentive to favor the higher and/or performance-based fee accounts over the Fund. The Adviser has adopted trade allocation and other policies and procedures that it believes are reasonably designed to address these and other conflicts of interest. These policies and procedures will have the effect of foreclosing certain investment opportunities for the Fund from time to time. Notwithstanding the foregoing, the Adviser will act in the best interest of the Fund in accordance with its fiduciary duty to the Fund.

Compensation

As of the date of this SAI, each portfolio manager is paid a base salary and may also be paid a discretionary bonus. The discretionary bonus, if any, is based upon the performance of the investments managed by the portfolio manager as well as the overall profitability of Hunter. In addition, as an owner of Hunter, each Portfolio Manager receives additional compensation in the form of net profits, if any, that Hunter earns.

Ownership of Securities

The following table shows the dollar range of equity securities beneficially owned by the portfolio managers in the Fund as of July 31, 2023.

Name of Portfolio Manager	Dollar Range of Equity Securities in the Fund
Alec Perkins	\$500,000 to \$1 Million
Bob Perkins	Over \$1 Million
Tom Perkins	Over \$1 Million

ALLOCATION OF PORTFOLIO BROKERAGE

Specific decisions to purchase or sell securities for the Fund is made by the portfolio manager, who is an employee of the Adviser. The Adviser is authorized by the Trustees to allocate the orders placed by it on behalf of the Fund to brokers or dealers who may, but need not, provide research or statistical material or other services to the Fund or the Adviser for the Fund's use. Such allocation is to be in such amounts and proportions as the Adviser may determine.

In selecting a broker or dealer to execute each particular transaction, the Adviser will take the following into consideration:

- the best net price available;
- the reliability, integrity and financial condition of the broker or dealer;
- the size of and difficulty in executing the order; and

- the value of the expected contribution of the broker or dealer to the investment performance of the Fund on a continuing basis.

Brokers or dealers executing a portfolio transaction on behalf of the Fund may receive a commission in excess of the amount of commission another broker or dealer would have charged for executing the transaction if the Adviser determines in good faith that such commission is reasonable in relation to the value of brokerage, research and other services provided to the Fund. In allocating portfolio brokerage, the Adviser may select brokers or dealers who also provide brokerage, research and other services to other accounts over which the Adviser exercises investment discretion. Some of the services received as the result of Fund transactions may primarily benefit accounts other than those of the Fund, while services received as the result of portfolio transactions effected on behalf of those other accounts may primarily benefit the Fund.

For the fiscal period ended July 31, 2023, the Fund paid \$9,525 in brokerage commissions.

PORTFOLIO TURNOVER

The Fund's portfolio turnover rate is calculated by dividing the lesser of purchases or sales of portfolio securities for the fiscal year by the monthly average of the value of the portfolio securities owned by the Fund during the fiscal year. The calculation excludes from both the numerator and the denominator securities with maturities at the time of acquisition of one year or less. High portfolio turnover involves correspondingly greater brokerage commissions and other transaction costs, which will be borne directly by that Fund. A 100% turnover rate would occur if all of the Fund's portfolio securities were replaced once within a one-year period.

During the fiscal period ended July 31, 2023, the portfolio turnover for the Fund was 29%.

OTHER SERVICE PROVIDERS

Fund Administration, Fund Accounting and Transfer Agent Services

Ultimus Fund Solutions, LLC ("UFS"), which has its principal office at 225 Pictoria Drive, Suite 450, Cincinnati, OH 45246, serves as administrator, fund accountant and transfer agent for the Fund pursuant to the Fund Services Agreement (the "Agreement") with the Fund and subject to the supervision of the Board. UFS is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds. UFS is an affiliate of the Distributor. UFS may also provide persons to serve as officers of the Fund. Such officers may be directors, officers or employees of UFS or its affiliates.

The Agreement is dated September 28, 2021. The Agreement was initially approved by the Board with respect to the Fund at a meeting held on December 7, 2022. The Agreement remains in effect for two years from its initial approval and will continue in effect for successive twelve-month periods provided that such continuance is specifically approved at least annually by a majority of the Board. The Agreement is terminable by the Board or UFS on 90 days' written notice and may be assigned by either party, provided that the Trust may not assign this agreement without the prior written consent of UFS. The Agreement provides that UFS shall be without liability for any action reasonably taken or omitted pursuant to the Agreement.

Under the Agreement, UFS performs administrative services for the Fund, including: (1) monitor the performance of administrative and professional services rendered to the Trust by others service providers; (2) monitor Fund holdings and operations for post-trade compliance with the Fund's registration statement and applicable laws and rules; (3) prepare and coordinate the printing of semi-annual and annual financial statements; (4) prepare selected management reports for performance and compliance analyses; (5) prepare and disseminate materials for and attend and participate in meetings of the Board; (6) determine income and capital gains available for distribution and calculate distributions required to meet regulatory, income, and excise tax requirements; (7) review the Trust's federal, state, and local tax returns as prepared and signed by the Trust's independent public accountants; (8) prepare and maintain the Trust's operating expense budget to determine proper expense accruals to be charged to the Fund to calculate its daily net asset value; (9) assist in and monitor the preparation, filing, printing and where applicable, dissemination to shareholders of amendments to the Trust's Registration Statement on Form N-1A, periodic reports to the Trustees, shareholders and the SEC, notices pursuant to Rule 24f-2, proxy materials and reports to the SEC on Forms N-SAR, N-CSR, N-PORT, N-CEN and N-PX; (10) coordinate the Trust's audits and examinations by assisting the Fund's independent public accountants; (11) determine, in consultation with others, the jurisdictions in which shares of the Trust shall be registered or qualified for sale and facilitate such registration or qualification; (12) monitor sales of shares and ensure that the shares are properly and duly registered with the SEC; (13) monitor the calculation of performance data for the Fund; (14) prepare, or cause to be prepared, expense and financial reports; (15) prepare authorization for the payment of Trust expenses and pay, from Trust assets, all bills of the Trust; (16) provide information typically supplied in the investment company industry to companies that track or report price, performance or other information with respect to investment companies; (17) upon request, assist the Fund in the evaluation and selection of other service providers, such as independent public accountants, printers, EDGAR providers and proxy solicitors (such parties may be affiliates of UFS); and (18) perform other services, recordkeeping and assistance relating to the affairs of the Trust as the Trust may, from time to time, reasonably request.

UFS also provides the Fund with accounting services, including: (i) daily computation of net asset value; (ii) maintenance of security ledgers and books and records as required by the 1940 Act; (iii) production of the Fund's listing of portfolio securities and general ledger reports; (iv) reconciliation of accounting records; (v) calculation of yield and total return for the Fund; (vi) maintaining certain books and records described in Rule 31a-1 under the 1940 Act, and reconciling account information and balances among the Fund's custodian and Adviser; and (vii) monitoring and evaluating daily income and expense accruals, and sales and redemptions of shares of the Fund.

UFS also acts as transfer, dividend disbursing, and shareholder servicing agent for the Fund pursuant to the Agreement. Under the agreement, UFS is responsible for administering and performing transfer agent functions, dividend distribution, shareholder administration, and maintaining necessary records in accordance with applicable rules and regulations.

For the services rendered to the Fund by UFS, the Fund pays UFS the greater of an annual minimum fee or an asset-based fee, which scales downward based upon net assets for fund administration, fund accounting and transfer agency services. For the fiscal period ended July 31, 2023, the Fund paid \$43,932 for fund administrative and fund accounting services, and \$16,237 for transfer agency services.

Custodian

U.S. Bank National Association (the "Custodian") serves as the custodian of the Fund's assets pursuant to a Custody Agreement by and between the Custodian and the Trust on behalf of the Fund. The Custodian's responsibilities include safeguarding and controlling the Fund's cash and securities, handling the receipt and delivery of securities, and collecting interest and dividends on the Fund's investments. Pursuant to the Custody Agreement, the Custodian also maintains original entry documents and books of record and general ledgers; posts cash receipts and disbursements; and records purchases and sales based upon communications from the Adviser. The Fund may employ foreign sub-custodians that are approved by the Board to hold foreign assets. The Custodian's principal place of business is 1555 North River Center Drive, Suite 302, Milwaukee, WI 53212.

Chief Compliance Officer

Northern Lights Compliance Services, LLC ("NLCS"), an affiliate of UFS and the Distributor, provides a Chief Compliance Officer to the Trust as well as related compliance services pursuant to a consulting agreement between NLCS and the Trust. NLCS's compliance services consist primarily of reviewing and assessing the policies and procedures of the Trust and its service providers pertaining to compliance with applicable federal securities laws, including Rule 38a-1 under the 1940 Act. For the compliance services rendered to the Fund, the Fund pays NLCS a one-time fee plus an annual asset-based fee, which scales downward based upon net assets. The Fund also pays NLCS for any out-of-pocket expenses.

DESCRIPTION OF SHARES

Each share of beneficial interest of the Trust has one vote in the election of Trustees. Cumulative voting is not authorized for the Trust. This means that the holders of more than 50% of the shares voting for the election of Trustees can elect 100% of the Trustees if they choose to do so, and, in that event, the holders of the remaining shares will be unable to elect any Trustees.

Shareholders of the Trust and any other future series of the Trust will vote in the aggregate and not by series except as otherwise required by law or when the Board determines that the matter to be voted upon affects only the interest of the shareholders of a particular series or classes. Matters such as ratification of the independent public accountants and election of Trustees are not subject to separate voting requirements and may be acted upon by shareholders of the Trust voting without regard to series.

The Trust's by-laws state that unless the Trust consents in writing to the selection of an alternative forum, the sole and exclusive forums for any Shareholder (including a beneficial owner) to bring (i) any derivative action or proceeding brought on behalf of the Trust; (ii) any action asserting a claim or breach of a fiduciary duty owed by any Trustee, officer or employee, if any, of the Trust to the Trust or the Trust's Shareholders or its beneficial owners; (iii) any action asserting a claim against the Trust, its Trustees, officers or employees, if any, arising pursuant to any provision of the Delaware Statutory Trust Act or the Trust's Agreement and Declaration of Trust or by-laws; or (iv) any action asserting a claim against the Trust, its Trustees, officers or employees, if any, governed by the internal affairs doctrine shall be a state or federal court located within the State of Delaware. The Trust's by-laws also state that any person or entity that is a shareholder of the Trust shall be deemed to have notice of and consented to the foregoing provisions of the Trust's by-laws. The Trust is authorized to issue an unlimited number of shares of beneficial interest. Each share has equal dividend, distribution and liquidation rights. There are no conversion or preemptive rights applicable to any shares of the Fund. All shares issued are fully paid and non-assessable.

ANTI-MONEY LAUNDERING PROGRAM

The Trust has established an Anti-Money Laundering Compliance Program (the "Program") as required by the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 ("USA PATRIOT

Act”). To ensure compliance with this law, the Trust’s Program provides for the development of internal practices, procedures and controls, designation of anti-money laundering compliance officers, an ongoing training program and an independent audit function to determine the effectiveness of the Program. The Trust’s Secretary serves as its Anti-Money Laundering Compliance Officer.

Procedures to implement the Program include, but are not limited to, determining that the Fund’s Distributor, and Transfer Agent have established proper anti-money laundering procedures, reported suspicious and/or fraudulent activity and a complete and thorough review of all new opening account applications. The Trust will not transact business with any person or entity whose identity cannot be adequately verified under the provisions of the USA PATRIOT Act.

As a result of the Program, the Trust may be required to “freeze” the account of a shareholder if the shareholder appears to be involved in suspicious activity or if certain account information matches information on government lists of known terrorists or other suspicious persons, or the Trust may be required to transfer the account or proceeds of the account to a governmental agency.

PURCHASE, REDEMPTION AND PRICING OF SHARES

Calculation of Share Price

As indicated in the Prospectus under the heading “How Shares Are Priced,” the net asset value (“NAV”) of the Fund’s shares is determined by dividing the total value of the Fund’s portfolio investments and other assets, less any liabilities, by the total number of shares outstanding of the Fund.

Generally, the Fund’s domestic securities (including underlying ETFs which hold portfolio securities primarily listed on foreign (non-U.S.) exchanges) are valued each day at the last quoted sales price on each security’s primary exchange. Securities traded or dealt in upon one or more securities exchanges for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers’ Automated Quotation System (“NASDAQ”) National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. The Board has appointed the Adviser as its designee (the “Valuation Designee”) for all fair value determinations and responsibilities, other than overseeing pricing service providers used by the Trust. If market quotations are not readily available, securities will be valued at their fair market value as determined in good faith by the Fund’s Valuation Designee in accordance with procedures approved by the Board and as further described below. Securities that are not traded or dealt in any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market.

Certain securities or investments for which daily market quotes are not readily available may be valued, pursuant to guidelines established by the Board, with reference to other securities or indices. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity. Short-term investments having a maturity of 60 days or less are generally valued at amortized cost.

Exchange traded options are valued at the last quoted sales price or, in the absence of a sale, at the mean between the current bid and ask prices on the exchange on which such options are traded. Futures and options on futures are valued at the settlement price determined by the exchange. Other securities for which market quotes are not readily available are valued at fair value as determined in good faith by the Valuation Designee. Swap agreements and other derivatives are generally valued daily based upon quotations from market makers or by a pricing service in accordance with the valuation procedures approved by the Board.

Under certain circumstances, the Fund may use an independent pricing service to calculate the fair market value of foreign equity securities on a daily basis by applying valuation factors to the last sale price or the mean price as noted above. The fair market values supplied by the independent pricing service will generally reflect market trading that occurs after the close of the applicable foreign markets of comparable securities or the value of other instruments that have a strong correlation to the fair-valued securities. The independent pricing service will also take into account the current relevant currency exchange rate. A security that is fair valued may be valued at a price higher or lower than actual market quotations or the value determined by other funds using their own fair valuation procedures. Because foreign securities may trade on days when Fund shares are not priced, the value of securities held by the Fund can change on days when Fund shares cannot be redeemed or purchased. In the event that a foreign security’s market quotations are not readily available or are deemed unreliable (for reasons other than because the foreign exchange on which it trades closed before the Fund’s calculation of NAV), the security will be valued at its fair market value as determined in good faith by the Fund’s Valuation Designee in accordance with procedures approved by the Board as discussed below. Without fair valuation, it is possible that short-term traders could take advantage of the arbitrage opportunity and dilute the NAV of long-term investors. Fair valuation of the Fund’s portfolio securities can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that it will prevent dilution of the Fund’s NAV by short-term traders. In addition, because the Fund may invest in underlying ETFs which hold portfolio securities primarily listed on foreign (non-U.S.) exchanges, and these exchanges may trade on weekends or other days when the

underlying ETFs do not price their shares, the value of these portfolio securities may change on days when you may not be able to buy or sell Fund shares.

Investments initially valued in currencies other than the U.S. dollar are converted to U.S. dollars using exchange rates obtained from pricing services. As a result, the NAV of the Fund's shares may be affected by changes in the value of currencies in relation to the U.S. dollar. The value of securities traded in markets outside the United States or denominated in currencies other than the U.S. dollar may be affected significantly on a day that the New York Stock Exchange is closed and an investor is not able to purchase, redeem or exchange shares.

Fund shares are valued at the close of regular trading on the New York Stock Exchange (normally 4:00 p.m., Eastern Time) (the "NYSE Close") on each day that the New York Stock Exchange is open. For purposes of calculating the NAV, the Fund normally uses pricing data for domestic equity securities received shortly after the NYSE Close and does not normally take into account trading, clearances or settlements that take place after the NYSE Close. Domestic fixed income and foreign (non-U.S.) securities are normally priced using data reflecting the earlier closing of the principal markets for those securities. Information that becomes known to the Fund or its agents after the NAV has been calculated on a particular day will not generally be used to retroactively adjust the price of the security or the NAV determined earlier that day.

When market quotations are insufficient or not readily available, the Fund may value securities at fair value or estimate their value as determined in good faith by the Valuation Designee, pursuant to procedures approved by the Board. Fair valuation may also be used by the Valuation Designee if extraordinary events occur after the close of the relevant market but prior to the NYSE Close.

The Fund may hold securities, such as private placements, interests in commodity pools, other non-traded securities or temporarily illiquid securities, for which market quotations are not readily available or are determined to be unreliable. These securities will be valued at their fair market value as determined using the "fair value" procedures approved by the Board. The Board has delegated execution of these procedures the Valuation Designee. The Valuation Designee may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value.

Fair Valuation Process. Fair value determinations are required for the following securities: (i) securities for which market quotations are insufficient or not readily available on a particular business day (including securities for which there is a short and temporary lapse in the provision of a price by the regular pricing source), (ii) securities for which, in the judgment of the adviser or sub-adviser, the prices or values available do not represent the fair value of the instrument. Factors which may cause the adviser or sub-adviser to make such a judgment include, but are not limited to, the following: only a bid price or an asked price is available; the spread between bid and asked prices is substantial; the frequency of sales; the thinness of the market; the size of reported trades; and actions of the securities markets, such as the suspension or limitation of trading; (iii) securities determined to be illiquid; (iv) securities with respect to which an event that will affect the value thereof has occurred (a "significant event") since the closing prices were established on the principal exchange on which they are traded, but prior to the Fund's calculation of its net asset value. Specifically, interests in commodity pools or managed futures pools are valued on a daily basis by reference to the closing market prices of each futures contract or other asset held by a pool, as adjusted for pool expenses. Restricted or illiquid securities, such as private placements or non-traded securities are valued via inputs from the adviser or sub-adviser valuation based upon the current bid for the security from two or more independent dealers or other parties reasonably familiar with the facts and circumstances of the security (who should take into consideration all relevant factors as may be appropriate under the circumstances). If the adviser or sub-adviser is unable to obtain a current bid from such independent dealers or other independent parties, the Valuation Designee shall determine the fair value of such security using the following factors: (i) the type of security; (ii) the cost at date of purchase; (iii) the size and nature of the Fund's holdings; (iv) the discount from market value of unrestricted securities of the same class at the time of purchase and subsequent thereto; (v) information as to any transactions or offers with respect to the security; (vi) the nature and duration of restrictions on disposition of the security and the existence of any registration rights; (vii) how the yield of the security compares to similar securities of companies of similar or equal creditworthiness; (viii) the level of recent trades of similar or comparable securities; (ix) the liquidity characteristics of the security; (x) current market conditions; and (xi) the market value of any securities into which the security is convertible or exchangeable.

Standards for Fair Value Determinations. As a general principle, the fair value of a security is the amount that the Fund might reasonably expect to realize upon its current sale. The Trust has adopted Financial Accounting Standards Board Statement of Financial Accounting Standards Codification Topic 820, Fair Value Measurements and Disclosures ("ASC 820"). In accordance with ASC 820, fair value is defined as the price that the Fund would receive upon selling an investment in a timely transaction to an independent buyer in the principal or most advantageous market of the investment. ASC 820 establishes a three-tier hierarchy to maximize the use of observable market data and minimize the use of unobservable inputs and to establish classification of fair value measurements for disclosure purposes. Inputs refer broadly to the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk, for example, the risk inherent in a particular valuation technique used to measure fair value including such a pricing model and/or the risk inherent in the inputs to the valuation technique. Inputs may be observable or unobservable. Observable inputs are inputs that reflect the assumptions market participants would use in pricing the asset or liability developed based on market data obtained from sources independent of the reporting entity. Unobservable inputs are inputs that reflect the reporting entity's own

assumptions about the assumptions market participants would use in pricing the asset or liability, developed based on the best information available under the circumstances.

Various inputs are used in determining the value of the Fund's investments relating to ASC 820. These inputs are summarized in the three broad levels listed below.

Level 1 – quoted prices in active markets for identical securities.

Level 2 – other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risk, etc).

Level 3 – significant unobservable inputs (including the Fund's own assumptions in determining the fair value of investments).

The Valuation Designee takes into account the relevant factors and surrounding circumstances, which may include: (i) the nature and pricing history (if any) of the security; (ii) whether any dealer quotations for the security are available; (iii) possible valuation methodologies that could be used to determine the fair value of the security; (iv) the recommendation of a portfolio manager of the Fund with respect to the valuation of the security; (v) whether the same or similar securities are held by other funds managed by the Adviser or other funds and the method used to price the security in those funds; (vi) the extent to which the fair value to be determined for the security will result from the use of data or formulae produced by independent third parties and (vii) the liquidity or illiquidity of the market for the security.

Board of Trustees Oversight. The Board is responsible for reviewing and approving fair value methodologies utilized by the Valuation Designee, which approval shall be based upon whether the Valuation Designee followed the Valuation Procedures established by the Board.

In unusual circumstances, instead of valuing securities in the usual manner, the Fund may value securities at fair value or estimate their value as determined in good faith by the Board or their designees, pursuant to procedures approved by the Board. Fair valuation may also be used by the Board if extraordinary events occur after the close of the relevant market but prior to the NYSE Close.

Purchase of Shares

Orders for shares received by the Fund in good order prior to the close of business on the NYSE on each day during such periods that the NYSE is open for trading are priced at net asset value per share computed as of the close of the regular session of trading on the NYSE. Orders received in good order after the close of the NYSE, or on a day it is not open for trading, are priced at the close of the NYSE on the next day on which it is open for trading at the next determined net asset value per share.

Notice to Texas Shareholders

Under section 72.1021(a) of the Texas Property Code, initial investors in the Fund who are Texas residents may designate a representative to receive notices of abandoned property in connection with Fund shares. Texas shareholders who wish to appoint a representative should notify the Trust's Transfer Agent by writing to the address below to obtain a form for providing written notice to the Trust:

Hunter Small Cap Value Fund
c/o Ultimus Fund Solutions, LLC
P.O. Box 541150
Omaha, NE 68154

Redemption of Shares

Shares of the Fund may be redeemed on any business day upon receipt of a request for redemption, in accordance with the procedures set forth in the Prospectus. Redemptions are effected at the per share NAV, next determined after receipt of the redemption request. Redemption proceeds will ordinarily be paid within seven days following receipt of instructions in proper form, or sooner, if required by law. The right of redemption may be suspended by the Trust or the payment date postponed beyond seven days when:

- (a) the NYSE is closed, other than customary weekend and holiday closings;
- (b) trading on that exchange is restricted for any reason;
- (c) when an emergency exists as a result of which disposal by the Fund of securities owned by it is not reasonably practicable or it is not reasonably practicable for the Fund to fairly determine the value of its net assets, provided that applicable rules and regulations of the SEC (or any succeeding governmental authority) will govern as to whether the conditions prescribed in (b) or (c) exist; or
- (d) the SEC by order permits a suspension of the right to redemption or a postponement of the date of payment on redemption.

In case of suspension of the right of redemption, payment of a redemption request will be made based on the net asset value next determined after the termination of the suspension.

If the Board should determine that it would be detrimental to the best interests of the remaining shareholders of the Fund to make payment wholly or partly in cash, the Fund may pay the redemption price in whole or part by a distribution in kind of securities from the Fund, in lieu of cash, in conformity with applicable rules of the SEC. If shares are redeemed in kind, the redeeming shareholder might incur brokerage costs in converting the assets into cash. The Fund has elected to be governed by Rule 18f-1 under the 1940 Act pursuant to which the Fund is obligated during any 90 day period to redeem shares for any one shareholder of record solely in cash up to the lesser of \$250,000 or 1% of the Fund's net assets at the beginning of such period.

Supporting documents in addition to those listed under "How to Redeem Shares" in the Prospectus will be required from executors, administrators, Trustees, or if redemption is requested by someone other than the shareholder of record. Such documents include, but are not restricted to, stock powers, Trust instruments, certificates of death, appointments as executor, certificates of corporate authority and waiver of tax required in some states when settling estates.

TAX STATUS

The following discussion is general in nature and should not be regarded as an exhaustive presentation of all possible tax ramifications. If an entity or arrangement treated as a partnership for U.S. federal income tax purposes holds shares of the Fund, the U.S. federal income tax treatment of a partner in such partnership generally will depend upon the status of the partner and activities of the partnership. All shareholders (and partners in a partnership that is a shareholder) should consult a qualified tax adviser regarding their investment in the Fund.

The Fund expects to qualify and has elected to be treated as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Internal Revenue Code"), and intends to continue to so qualify, which requires compliance with certain requirements concerning the sources of its income, diversification of its assets, and the amount and timing of its distributions to shareholders, as described more fully below. Such qualification does not involve supervision of management or investment practices or policies by any government agency or bureau. By so qualifying, the Fund should not be subject to U.S. federal income or excise tax on its investment company taxable income or net capital gain, which are distributed to shareholders in accordance with the applicable timing requirements. Investment company taxable income and net capital gain of the Fund will be computed in accordance with Section 852 of the Internal Revenue Code.

Investment company taxable income is made up of dividends and interest less expenses, plus any excess of net short-term capital gains over net long-term capital losses. Net capital gain (that is, the excess of net long-term capital gains over net-short-term capital losses) for a fiscal year is computed by taking into account any capital loss carryforward of the Fund. Capital losses may be carried forward indefinitely and retain the character of the original loss. Capital loss carry forwards are available to offset future realized capital gains. To the extent that these carry forwards are used to offset future capital gains it is probable that the amount offset will not be distributed to shareholders.

To be treated as a regulated investment company under Subchapter M of the Internal Revenue Code, the Fund must, among other things, (a) derive at least 90% of its gross income from dividends, interest, payments with respect to certain securities loans, gains from the sale or other disposition of stocks, securities or foreign (non-U.S.) currencies, or other income (including gains from options, futures or forward contracts) derived with respect to the business of investing in such securities or currencies, and net income from "qualified publicly traded partnerships" (as defined in Section 851(h) of the Internal Revenue Code), and (b) diversify its holdings so that, at the end of each quarter, (i) at least 50% of the value of the Fund's total assets is represented by cash and cash items, U.S. government securities and securities of other regulated investment companies, and other securities (for purposes of this calculation, generally limited in respect of any one issuer, to an amount not greater than 5% of the value of the Fund's total assets and 10% of the outstanding voting securities of such issuer) and (ii) not more than 25% of the value of the Fund's total assets is invested in the securities (other than U.S. government securities or the securities of other regulated investment companies) of any one issuer, or two or more issuers which the Fund controls and which are determined to be engaged in the same or similar trades or businesses, or the securities of certain publicly traded partnerships.

If the Fund qualifies as a regulated investment company and distributes to its shareholders each taxable year an amount equal to or exceeding the sum of (i) 90% of its investment company taxable income without regard to the deduction for dividends paid and (ii) 90% of the excess of its gross tax-exempt interest, if any, over certain disallowed deductions, the Fund generally will not be subject to U.S. federal income tax on any income of the Fund, including net capital gain, distributed to shareholders. If, however, the Fund meets such distribution requirements, but chooses to retain a portion of its investment company taxable income or net capital gain, it generally will be subject to U.S. federal income tax at regular corporate rates on the amount retained.

The Fund intends to distribute all of its investment company taxable income and any net capital gains in accordance with the timing requirements imposed by the Internal Revenue Code and therefore should not be required to pay any U.S. federal income or excise taxes. Distributions of investment company taxable income and net capital gain will be made after the end of each fiscal year ending April 30, and no later than December 31 of each year. Both types of distributions will be in shares of the Fund unless a shareholder elects to receive cash.

If the Fund fails to qualify as a regulated investment company under Subchapter M of the Internal Revenue Code in any fiscal year, it will be treated as a corporation for federal income tax purposes. As such, the Fund would be required to pay income taxes on its investment company taxable income and net capital gains, if any, at the rates generally applicable to corporations (currently, at a maximum rate of 21%). Shareholders of the Fund generally would not be liable for U.S. federal income tax on the Fund's investment company taxable income or net capital gains in their individual capacities. Distributions to shareholders, whether from the Fund's investment company taxable income or net capital gains, would be treated as taxable dividends to the extent of current or accumulated earnings and profits of the Fund.

The Fund is subject to a 4% nondeductible excise tax on certain undistributed amounts of ordinary income and capital gain under a prescribed formula contained in Section 4982 of the Internal Revenue Code. The formula requires payment to shareholders during a calendar year of distributions representing at least 98% of the Fund's ordinary income for the calendar year and at least 98.2% of its capital gain net income (i.e., the excess of its capital gains over capital losses) realized during the one-year period ending October 31 during such year plus 100% of any income that was neither distributed nor taxed to the Fund during the preceding calendar year. Under ordinary circumstances, the Fund expects to time its distributions so as to avoid liability for this tax.

Dividends or distributions declared in October, November or December as of a record date in such a month, if any, will be deemed to have been received by shareholders on December 31, if paid during January of the following year. Redemptions of shares may result in tax consequences (gain or loss) to the shareholder and are also subject to these reporting requirements. In addition, certain other distributions made after the close of a taxable year of the Fund may be "spilled back" and treated as paid by the Fund (except for the purposes of the 4% excise tax) during such taxable year. In such case, shareholders generally will be treated as having received such dividends in the taxable year in which the distributions were actually made.

The following discussion of tax consequences is for the general information of shareholders that are subject to tax. Shareholders that are IRAs or other qualified retirement plans are exempt from income taxation under the Internal Revenue Code.

Distributions of investment company taxable income are taxable to shareholders as ordinary income. Because the Fund's income is derived primarily from sources that do not pay "qualified dividend income," dividends from the Fund generally are not expected to qualify for taxation at the long-term capital gain rates available to individuals on qualified dividend income. Furthermore, dividends from the Fund generally are not expected to qualify for the dividends-received deduction for shareholders that are corporations. Distributions of net capital gain ("capital gain dividends") generally are taxable to shareholders as long-term capital gain, regardless of the length of time the shares of the Fund have been held by such shareholders.

Distributions by the Fund in excess of the Fund's current and accumulated earnings and profits will be treated as a return of capital to the extent of (and in reduction of) a shareholder's tax basis in his or her Fund shares and any such amount in excess of that basis will be treated as gain from the sale of shares, as discussed below. Distributions of investment company taxable income and net capital gain will be taxable as described above, whether received in cash or additional shares. Shareholders electing to receive distributions in the form of additional shares will have a cost basis for U.S. federal income tax purposes in each share so received equal to the amount of cash the shareholder could have received.

A redemption of Fund shares by a shareholder will result in the recognition of taxable gain or loss in an amount equal to the difference between the amount realized and the shareholder's tax basis in his or her shares of the Fund. Such gain or loss is treated as a capital gain or loss if the shares are held as capital assets. However, any loss realized upon the redemption of shares within six months from the date of their purchase will be treated as a long-term capital loss to the extent of any amounts treated as capital gain dividends during such six-month period. All or a portion of any loss realized upon the redemption of shares may be disallowed to the extent shares are purchased (including shares acquired by means of reinvested dividends) within 30 days before or after such redemption.

An additional 3.8% Medicare tax will be imposed on certain investment company taxable income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Fund shares) of U.S. individuals, estates and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceed certain threshold amounts.

Under the Internal Revenue Code, the Fund will be required to report to the Internal Revenue Service ("IRS") all distributions of taxable income and capital gains as well as gross proceeds from the redemption or exchange of Fund shares of the Fund, except in the case of certain exempt shareholders. Under the backup withholding provisions of Section 3406 of the Internal Revenue Code, distributions of investment company taxable income and net capital gain and proceeds from the redemption or exchange of the shares of a regulated

investment company may be subject to withholding of U.S. federal income tax (currently, at a 24% rate) in the case of non-exempt shareholders who fail to furnish the Fund with their taxpayer identification numbers and with required certifications regarding their status under the U.S. federal income tax law, or if the Fund is notified by the IRS or a broker that withholding is required due to an incorrect social security number or taxpayer identification number or a previous failure to report taxable interest or dividends. If the withholding provisions are applicable, any such distributions and proceeds, whether taken in cash or reinvested in additional shares, will be reduced by the amounts required to be withheld.

The Fund (or its administrative agent) is required to report to the IRS and furnish to shareholders the cost basis information for sale transactions of shares. Shareholders may elect to have one of several cost basis methods applied to their account when calculating the cost basis of shares sold, including average cost, FIFO or some other specific identification method. Unless you instruct otherwise, the Fund will use average cost as its default cost basis method. If average cost is used for the first sale of shares covered by these rules, the shareholder may only use an alternative cost basis method for shares purchased prospectively. Shareholders should consult with their tax advisers to determine the best cost basis method for their tax situation. Shareholders that hold their shares through a financial intermediary should contact such financial intermediary with respect to reporting of cost basis and available elections for their accounts.

Foreign (Non-U.S.) Shareholders

The foregoing discussion relates only to U.S. federal income tax law as applicable to U.S. persons (i.e., U.S. citizens and residents and domestic corporations, trusts and estates). Shareholders who are not U.S. persons should consult their tax advisers regarding U.S. and foreign (non-U.S.) tax consequences of ownership of shares of the Fund, including the likelihood that distributions to them would be subject to withholding of U.S. federal income tax at a rate of 30% (or at a lower rate under a tax treaty) and the possibility they may be subject to U.S. estate tax. A portion of the Fund's distributions received by a foreign (non-U.S.) shareholder may, however, be exempt from U.S. withholding tax to the extent properly reported by the Fund as attributable to U.S. source interest income and short-term capital gains. If a foreign (non-U.S.) shareholder is eligible for a reduced rate of withholding tax under an applicable tax treaty, the foreign (non-U.S.) shareholder will be required to provide an applicable IRS Form W-8 certifying its entitlement to benefits under the treaty in order to obtain a reduced rate of withholding tax. However, if the distributions are effectively connected with a U.S. trade or business of the foreign (non-U.S.) shareholder (or, if an income tax treaty applies, attributable to a permanent establishment in the United States of the foreign (non-U.S.) shareholder), then the distributions will be subject to U.S. federal income tax at the rates applicable to U.S. persons, plus, in certain cases where the foreign (non-U.S.) shareholder is a corporation, a branch profits tax at a 30% rate (or lower rate provided in an applicable treaty). If the foreign (non-U.S.) shareholder is subject to such U.S. income tax on a distribution, then the Fund is not required to withhold U.S. federal tax if the foreign (non-U.S.) shareholder complies with applicable certification and disclosure requirements.

Ordinary dividends paid to a foreign (non-U.S.) shareholder that fails to make certain required certifications, or that is a "foreign financial institution" as defined in Section 1471 of the Internal Revenue Code and that does not meet the requirements imposed on foreign financial institutions by Section 1471, are generally subject to a U.S. withholding tax at a 30% rate. A foreign (non-U.S.) shareholder may be exempt from the withholding described in this paragraph under an intergovernmental agreement between the U.S. and a foreign government, provided that the shareholder and the applicable foreign government comply with the terms of such agreement. While withholding described in this paragraph would have also applied to payments of gross proceeds from the sale or other disposition of shares on or after January 1, 2019, proposed Treasury regulations eliminate such withholding on payments of gross proceeds entirely. Taxpayers generally may rely on these proposed Treasury regulations until final Treasury regulations are issued.

Options, Futures, Forward Contracts and Swap Agreements

To the extent such investments are permissible for the Fund, the Fund's transactions in options, futures contracts, hedging transactions, forward contracts, straddles and foreign (non-U.S.) currencies will be subject to special tax rules (including mark-to-market, constructive sale, straddle, wash sale and short sale rules), the effect of which may be to accelerate income to the Fund, defer losses to the Fund, cause adjustments in the holding periods of the Fund's securities, convert long-term capital gains into short-term capital gains and convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing and character of distributions to shareholders.

Passive Foreign Investment Companies

Investment by the Fund in a "passive foreign investment company" ("PFIC") could subject the Fund to U.S. federal income tax (including interest charges) on distributions received from the company or on proceeds received from the disposition of shares in the company, which tax cannot be eliminated by making distributions to Fund shareholders. However, the Fund may elect to treat a PFIC as a "qualified electing fund" ("QEF"), in which case the Fund will be required to include its share of the company's income and net capital gains annually, regardless of whether it receives any distribution from the company.

The Fund also may make an election to "mark to market" the gains (and to a limited extent losses) in such holdings as though it had sold and repurchased its holdings in those PFICs on the last day of the Fund's taxable year. Such gains and losses are treated as ordinary

income and loss. The QEF and mark-to-market elections may accelerate the recognition of income (without the receipt of cash) and increase the amount required to be distributed for the Fund to avoid taxation. Making either of these elections therefore may require the Fund to liquidate other investments (including when it is not advantageous to do so) to meet its distribution requirement, which also may accelerate the recognition of gain and affect the Fund's total return.

Foreign (Non-U.S.) Currency Transactions

The Fund's transactions in foreign (non-U.S.) currencies, foreign (non-U.S.) currency-denominated fixed income securities and certain foreign (non-U.S.) currency options, futures contracts and forward contracts (and similar instruments) may give rise to ordinary income or loss to the extent such income or loss results from fluctuations in the value of the foreign (non-U.S.) currency concerned.

Foreign (Non-U.S.) Taxation

Income received by the Fund from sources within foreign (non-U.S.) countries may be subject to withholding and other taxes imposed by such countries. Tax treaties and conventions between certain countries and the U.S. may reduce or eliminate such taxes. If more than 50% of the value of the Fund's total assets at the close of its taxable year consists of securities of foreign (non-U.S.) corporations, the Fund may be able to elect to "pass through" to the Fund's shareholders the amount of eligible foreign (non-U.S.) income and similar taxes paid by the Fund. If this election is made, a shareholder generally subject to tax will be required to include in gross income (in addition to taxable dividends actually received) his or her pro rata share of the foreign (non-U.S.) taxes paid by the Fund, and may be entitled either to deduct (as an itemized deduction) his or her pro rata share of foreign (non-U.S.) taxes in computing his or her taxable income or to use it as a foreign (non-U.S.) tax credit against his or her U.S. federal income tax liability, subject to certain limitations. In particular, a shareholder must hold his or her shares (without protection from risk of loss) on the ex-dividend date and for at least 15 more days during the 30-day period surrounding the ex-dividend date to be eligible to claim a foreign (non-U.S.) tax credit with respect to a gain dividend. No deduction for foreign (non-U.S.) taxes may be claimed by a shareholder who does not itemize deductions. Each shareholder will be notified within 60 days after the close of the Fund's taxable year whether the foreign (non-U.S.) taxes paid by the Fund will "pass through" for that year.

Generally, a credit for foreign (non-U.S.) taxes is subject to the limitation that it may not exceed the shareholder's U.S. tax attributable to his or her total foreign (non-U.S.) source taxable income. For this purpose, if the pass-through election is made, the source of the Fund's income will flow through to shareholders of the Fund. With respect to the Fund, gains from the sale of securities will be treated as derived from U.S. sources and certain currency fluctuation gains, including fluctuation gains from foreign (non-U.S.) currency-denominated fixed income securities, receivables and payables will be treated as ordinary income derived from U.S. sources. The limitation on the foreign (non-U.S.) tax credit is applied separately to foreign (non-U.S.) source passive income, and to certain other types of income. A shareholder may be unable to claim a credit for the full amount of his or her proportionate share of the foreign (non-U.S.) taxes paid by the Fund. The foreign (non-U.S.) tax credit can be used to offset only 90% of the revised alternative minimum tax imposed on individuals and foreign (non-U.S.) taxes generally are not deductible in computing alternative minimum taxable income.

Original Issue Discount, Pay-In-Kind and Market Discount Securities

Investments by the Fund in zero coupon securities, deferred interest securities, other securities with original issue discount (or with market discount if the Fund elects to include market discount in income currently) or pay-in-kind securities will require the Fund to accrue income on such investments for each taxable year, generally prior to the receipt of the corresponding cash payments. However, the Fund must distribute, at least annually, all or substantially all of its net income, including such accrued income, to shareholders to qualify as a regulated investment company under the Internal Revenue Code and avoid U.S. federal income and excise taxes. Therefore, the Fund may have to dispose of portfolio securities under disadvantageous circumstances to generate cash to satisfy its distribution requirements.

By holding the foregoing kinds of securities, the Fund may be required to pay out as an income distribution each year an amount which is greater than the total amount of cash interest the Fund actually received. Such distributions may be made from the cash assets of the Fund or by liquidation of portfolio securities, if necessary (including when it is not advantageous to do so). The Fund may realize gains or losses from such liquidations. In the event the Fund realizes net capital gains from such transactions, its shareholders may receive a larger capital gain distribution, if any, than they would in the absence of such transactions.

If a shareholder recognizes a loss with respect to the Fund shares of \$2 million or more for a shareholder that is an individual or a trust, or \$10 million or more for a shareholder that is a corporation (excluding S corporations), in any single taxable year (or a greater amount over a combination of years), the shareholder must file with the IRS a disclosure statement on Form 8886. Shareholders who own portfolio securities directly are in many cases excepted from this reporting requirement but, under current guidance, shareholders of regulated investment companies are not excepted. A shareholder who fails to make the required disclosure to the IRS may be subject to substantial penalties. The fact that a loss is reportable under these regulations does not affect the legal determination of whether or not the taxpayer's treatment of the loss is proper. Shareholders should consult with their tax advisers to determine the applicability of these

regulations in light of their individual circumstances. Shareholders of the Fund may be subject to state and local taxes on distributions received from the Fund and on redemptions of the Fund's shares.

A brief explanation of the form and character of the distribution accompany each distribution. In January of each year the Fund issues to each shareholder a statement of the U.S. federal income tax status of all distributions.

Shareholders should consult their tax advisers about the application of federal, state and local and foreign (non-U.S.) tax law in light of their particular situation.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Cohen & Company, Ltd., located at 1835 Market Street, Suite 310, Philadelphia, PA 19103, serves as the Fund's independent registered public accounting firm, providing services including (i) audit of annual financial statements, (ii) review of certain documents to be filed with the U.S. Securities and Exchange Commission, and (iii) other audit related and tax services, including preparation of the Fund's tax returns.

LEGAL COUNSEL

Blank Rome LLP, 1271 Avenue of the Americas, New York, NY 10020 serves as the Trust's legal counsel.

FINANCIAL STATEMENTS

The financial statements of the Fund included in the Fund's most recent annual reports to shareholders for the fiscal period ended July 31, 2023, including the notes thereto and reports of the independent registered public accounting firm thereon, are incorporated by reference into this SAI. These financial statements include the Fund's schedule of investments, statements of assets and liabilities, statements of operations, statements of changes in net assets, financial highlights and notes. You may obtain a copy of the Fund's annual or semi-annual report by calling the Fund at 1-866-866-4848.

APPENDIX A

ADVISER PROXY VOTING POLICIES AND PROCEDURES

HUNTER CAPITAL MANAGEMENT

PROXY VOTING POLICY 2022

PHILOSOPHY ON PROXY VOTING

Hunter Capital Management (“HCM” and/or “we”) considers proxy voting to be an important tool with which to engage companies in its listed equities portfolio. We believe it is our responsibility to exercise our proxy voting authority in the best interest of our clients. In general, HCM supports proxy proposals that encourage stewardship of core stakeholders: investors, customers, employees, environment, and society.

Of note, voting against management is not our desired outcome, as it increases conflict between HCM, its clients, and the investee company. It is often a last resort tool, where traditional engagement efforts have not produced the desired outcome. Our aspiration is to be long-term, constructive shareholders that partner with management teams to advance interests of all parties and stakeholders.

PROCEDURES

HCM believes it is important to participate in the proxy voting process in all instances. To determine how to vote, HCM investment professionals assess multiple factors, including environment, social, and governance (ESG) issues, in evaluating whether a vote for, against or abstention is in the best interest of the client. Moreover, we consider each proxy proposal individually on a case-by-case basis. As a result, similar proposals for different companies may receive differing votes from HCM. Voting decisions are a collaborative effort within the HCM investment team and include the approval of the Chief Executive Officer.

GUIDELINES

HCM's investment philosophy is centered on investing in "quality companies," a subset of businesses that have strong corporate governance frameworks, align interests with those of minority shareholders, and believe in stewardship of the environment and society. To this end, HCM has adopted certain proxy voting guidelines that are in the spirit of our core investment tenants, assisting the investment team in the review and voting of proxies.

Board Structure and Diversity

The Board of Directors has substantial influence on a company, affecting short- and long-term direction, makeup of senior management, and defining top-down operating culture. In this regard, HCM believes majority independent, non-staggard Boards are best positioned to act effectively in the interest of the company, its core stakeholders, and minority shareholders.

Independent directors, we think, play a critical role in increasing oversight on the Board and reducing conflicts of interest. To this end, we view the roles of Chairperson of the Board and CEO to be separate; as best practice, we prefer an independent Chairperson of the Board. To hold Board members accountable, both independent and executive, we believe voting in their elections should be open solely to minority shareholders.

We also believe that diverse Boards are best placed to steer companies through today's increasingly globalized markets. Companies that recruit demographically and cognitively diverse directors bring fresh viewpoints and perspectives to a boardroom. As such, we generally support proposals that improve the gender, racial, and ethnic composition of the Board, while also expanding the Board's experiential breadth and skillset depth.

Board Committees

HCM believes safeguards of good corporate governance include separate audit and compensation committees. Moreover, the makeup of these committees should be majority independent, with an independent Chairperson. We believe (a) audit committees should appoint well-regarded, independent auditors with reliable track records and (b) compensation committees should tie executive remuneration to long-term interests of all stakeholders. In general, we support proposals that improve the establishment and continuation of audit and compensation committees and increase their independence.

Compensation

HCM believes companies should disclose salaries, incentives, and share ownership of executives, including the criteria employed in determining executive compensation. Moreover, we encourage ‘say-on-pay’ votes that empower minority shareholders to weigh in on executives’ compensation.

In general, we support proposals that fairly compensate executives relative to industry standards, particularly packages that link remuneration to long-term company performance. Additionally, HCM evaluates proposed stock option plans and issuances based on, in part, the potential dilutive effect on minority shareholders and the long-term sustainability of company operations.

Shareholder Rights

In the spirit of protecting shareholder rights, HCM believes in confidential voting, independent tabulation of voting results, and voting on the approval of poison pills. Similarly, we generally oppose proposals that may lead to super-majority voting requirements and limit the ability of shareholders to call special meetings or amend bylaws.

Environmental and Social Stewardship

HCM believes that companies that effectively address environment and social issues, while improving the impact they have on the planet and its communities, are best positioned to create long-term shareholder value. Where applicable, we expect to vote in line with our ESG Policy.

- *Environment* – HCM examines proposals relating to companies’ environmental impact and stewardship on a case-by-case basis. In this process, the investment team takes into consideration material environmental factors, such as climate change, materials sourcing, and water management. We pay attention to environmental litigation and support proposals that mitigate related risks. Additionally, we generally support proposals aimed at reducing a company’s carbon footprint.
- *Social* – HCM examines proposals relating to companies’ social impact and stewardship on a case-by-case basis. In this process, the investment team takes into consideration material social factors, such as labor practices, consumer welfare, and health and safety. As a matter of principle, we support safe workplaces, oppose slave and child labor, and do not tolerate discrimination. Therefore, we generally support proposals that improve companies’ impact on its communities, employees, and consumers.

VALUE INVESTING PRINCIPLES

As value investors, our strategy is to invest in undervalued businesses. Often, these dislocations in valuation occur due to non-fundamental reasons. On other occasions, valuations are depressed because of specific concerns with the company. As part of our approach, we may invest in companies that are undervalued because they currently fall short on one or more of the abovementioned guidelines, but our due diligence indicates they may advance in these areas over time. In this regard, we strive to use the guidelines detailed herein to engage companies in a constructive manner. Over time, we believe our dialogue and proxy votes in line with these principles will improve company performance and lift valuations.

CONFLICTS OF INTEREST

In circumstances where there is a conflict between the interest of a client(s) and the interests of HCM (or an affiliated person), HCM will attempt to vote in line with the Proxy Policy (“this Policy”). If the guidelines detailed in this Policy are not applicable to the specific circumstance, HCM may abstain from voting.

DISCLOSURE

In general, HCM strives to keep its clients apprised on its proxy voting principles, which are detailed in this Policy. Upon request, we will provide clients with written details of how their securities were voted.

RECORDKEEPING

HCM will maintain the following records for a period of at least five years:

- Copy of this Policy, including any future amendments;
- Proxy Statements received regarding client securities;
- Record of all votes cast on behalf of clients;
- Copies of documents and reports prepared that were material to making a decision on how HCM voted or memorialized the basis for the voting decision; and,
- Records of all written client requests for proxy voting information and HCM’s responses to any client request, including the date of the request, shareholder name, and the date of the response.

Where applicable, HCM may rely on the Securities and Exchange Commission's ("SEC") EDGAR system for proxy statements instead of keeping its own copies.

APPENDIX B

DESCRIPTION OF SECURITIES RATINGS

The ratings of Moody's Investors Service, Inc. ("Moody's"), Standard & Poor's Ratings Services ("S&P Global Ratings") and Fitch Ratings ("Fitch") represent their respective opinions as of the date they are expressed and not statements of fact as to the quality of various long-term and short-term debt instruments they undertake to rate. It should be emphasized that ratings are general and are not absolute standards of quality. Consequently, debt instruments with the same maturity, coupon and rating may have different yields while debt instruments of the same maturity and coupon with different ratings may have the same yield. Ratings do not constitute recommendations to buy, sell, or hold any security, nor do they comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of any payments of any security.

Short-Term Credit Ratings

An *S&P Global Ratings* short-term issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation having an original maturity of no more than 365 days. The following summarizes the rating categories used by S&P Global Ratings for short-term issues:

"A-1" – A short-term obligation rated "A-1" is rated in the highest category by S&P Global Ratings. The obligor's capacity to meet its financial commitments on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitments on these obligations is extremely strong.

"A-2" – A short-term obligation rated "A-2" is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitments on the obligation is satisfactory.

"A-3" – A short-term obligation rated "A-3" exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to weaken an obligor's capacity to meet its financial commitments on the obligation.

"B" – A short-term obligation rated "B" is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties that could lead to the obligor's inadequate capacity to meet its financial commitments.

"C" – A short-term obligation rated "C" is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitments on the obligation.

"D" – A short-term obligation rated "D" is in default or in breach of an imputed promise. For non-hybrid capital instruments, the "D" rating category is used when payments on an obligation are not made on the date due, unless S&P Global Ratings believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The "D" rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation's rating is lowered to "D" if it is subject to a distressed exchange offer.

Local Currency and Foreign Currency Ratings – S&P Global Ratings' issuer credit ratings make a distinction between foreign currency ratings and local currency ratings. An issuer's foreign currency rating will differ from its local currency rating when the obligor has a different capacity to meet its obligations denominated in its local currency, vs. obligations denominated in a foreign currency.

Moody's Investors Service ("Moody's") short-term ratings are forward-looking opinions of the relative credit risks of financial obligations with an original maturity of thirteen months or less and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default.

Moody's employs the following designations to indicate the relative repayment ability of rated issuers:

"P-1" – Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.

“P-2” – Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.

“P-3” – Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term obligations.

“NP” – Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

Fitch, Inc. / Fitch Ratings Ltd. (“Fitch”) short-term issuer or obligation ratings are based in all cases on the short-term vulnerability to default of the rated entity and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-term deposit ratings may be adjusted for loss severity. Short-term ratings are assigned to obligations whose initial maturity is viewed as “short-term” based on market convention. Typically, this means up to 13 months for corporate, sovereign, and structured obligations and up to 36 months for obligations in U.S. public finance markets. The following summarizes the rating categories used by Fitch for short-term obligations:

“F1” – Securities possess the highest short-term credit quality. This designation indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

“F2” – Securities possess good short-term credit quality. This designation indicates good intrinsic capacity for timely payment of financial commitments.

“F3” – Securities possess fair short-term credit quality. This designation indicates that the intrinsic capacity for timely payment of financial commitments is adequate.

“B” – Securities possess speculative short-term credit quality. This designation indicates minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

“C” – Securities possess high short-term default risk. Default is a real possibility.

“RD” – Restricted default. Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Typically applicable to entity ratings only.

“D” – Default. Indicates a broad-based default event for an entity, or the default of a short-term obligation.

“NR” – This designation indicates that Fitch does not publicly rate the associated issuer or issue.

“WD” – This designation indicates that the rating has been withdrawn and is no longer maintained by Fitch.

DBRS[®] Ratings Limited (“DBRS”) short-term debt rating scale provides an opinion on the risk that an issuer will not meet its short-term financial obligations in a timely manner. Ratings are based on quantitative and qualitative considerations relevant to the issuer and the relative ranking of claims. The “R-1” and “R-2” rating categories are further denoted by the sub-categories “(high)”, “(middle)”, and “(low)”.

The following summarizes the ratings used by DBRS for commercial paper and short-term debt:

“**R-1 (high)**” - Short-term debt rated “R-1 (high)” is of the **highest credit quality**. **The capacity for the payment of short-term financial obligations** as they fall due is exceptionally high. Unlikely to be adversely affected by future events.

“**R-1 (middle)**” – Short-term debt rated “R-1 (middle)” is of superior credit quality. The capacity for the payment of short-term financial obligations as they fall due is very high. Differs from “R-1 (high)” by a relatively modest degree. Unlikely to be significantly vulnerable to future events.

“**R-1 (low)**” – Short-term debt rated “R-1 (low)” is of **good credit quality**. The capacity for the payment of short-term financial obligations as they fall due is substantial. Overall strength is not as favorable as higher rating categories. May be vulnerable to future events, but qualifying negative factors are considered manageable.

“R-2 (high)” – Short-term debt rated “R-2 (high)” is considered to be at the upper end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events.

“R-2 (middle)” – Short-term debt rated “R-2 (middle)” is considered to be of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events or may be exposed to other factors that could reduce credit quality.

“R-2 (low)” – Short-term debt rated “R-2 (low)” is considered to be at the lower end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events. A number of challenges are present that could affect the issuer’s ability to meet such obligations.

“R-3” – Short-term debt rated “R-3” is considered to be at the lowest end of adequate credit quality. There is a capacity for the payment of short-term financial obligations as they fall due. May be vulnerable to future events and the certainty of meeting such obligations could be impacted by a variety of developments.

“R-4” – Short-term debt rated “R-4” is considered to be of speculative credit quality. The capacity for the payment of short-term financial obligations as they fall due is uncertain.

“R-5” – Short-term debt rated “R-5” is considered to be of highly speculative credit quality. There is a high level of uncertainty as to the capacity to meet short-term financial obligations as they fall due.

“D” – Short-term debt rated “D” is assigned when the issuer has filed under any applicable bankruptcy, insolvency or winding up statute or there is a failure to satisfy an obligation after the exhaustion of grace periods, a downgrade to “D” may occur. DBRS may also use “SD” (Selective Default) in cases where only some securities are impacted, such as the case of a “distressed exchange”.

Long-Term Credit Ratings

The following summarizes the ratings used by *S&P Global Ratings* for long-term issues:

“AAA” – An obligation rated “AAA” has the highest rating assigned by S&P Global Ratings. The obligor’s capacity to meet its financial commitments on the obligation is extremely strong.

“AA” – An obligation rated “AA” differs from the highest-rated obligations only to a small degree. The obligor’s capacity to meet its financial commitments on the obligation is very strong.

“A” – An obligation rated “A” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor’s capacity to meet its financial commitments on the obligation is still strong.

“BBB” – An obligation rated “BBB” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to weaken the obligor’s capacity to meet its financial commitments on the obligation.

“BB,” “B,” “CCC,” “CC” and “C” – Obligations rated “BB,” “B,” “CCC,” “CC” and “C” are regarded as having significant speculative characteristics. “BB” indicates the least degree of speculation and “C” the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

“BB” – An obligation rated “BB” is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions that could lead to the obligor’s inadequate capacity to meet its financial commitments on the obligation.

“B” – An obligation rated “B” is more vulnerable to nonpayment than obligations rated “BB”, but the obligor currently has the capacity to meet its financial commitments on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor’s capacity or willingness to meet its financial commitments on the obligation.

“CCC” – An obligation rated “CCC” is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitments on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitments on the obligation.

“CC” – An obligation rated “CC” is currently highly vulnerable to nonpayment. The “CC” rating is used when a default has not yet occurred but S&P Global Ratings expects default to be a virtual certainty, regardless of the anticipated time to default.

“C” – An obligation rated “C” is currently highly vulnerable to nonpayment, and the obligation is expected to have lower relative seniority or lower ultimate recovery compared with obligations that are rated higher.

“D” – An obligation rated “D” is in default or in breach of an imputed promise. For non-hybrid capital instruments, the “D” rating category is used when payments on an obligation are not made on the date due, unless S&P Global Ratings believes that such payments will be made within five business days in the absence of a stated grace period or within the earlier of the stated grace period or 30 calendar days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation’s rating is lowered to “D” if it is subject to a distressed exchange offer.

“NR” – This indicates that no rating has been requested, or that there is insufficient information on which to base a rating, or that S&P Global Ratings does not rate a particular obligation as a matter of policy.

Plus (+) or minus (-) – The ratings from “AA” to “CCC” may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

Local Currency and Foreign Currency Ratings - S&P Global Ratings’ issuer credit ratings make a distinction between foreign currency ratings and local currency ratings. An issuer’s foreign currency rating will differ from its local currency rating when the obligor has a different capacity to meet its obligations denominated in its local currency, vs. obligations denominated in a foreign currency.

Moody’s long-term ratings are forward-looking opinions of the relative credit risks of financial obligations with an original maturity of one year or more and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default. The following summarizes the ratings used by Moody’s for long-term debt:

“Aaa” – Obligations rated “Aaa” are judged to be of the highest quality, subject to the lowest level of credit risk.

“Aa” – Obligations rated “Aa” are judged to be of high quality and are subject to very low credit risk.

“A” – Obligations rated “A” are judged to be upper-medium grade and are subject to low credit risk.

“Baa” – Obligations rated “Baa” are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

“Ba” – Obligations rated “Ba” are judged to be speculative and are subject to substantial credit risk.

“B” – Obligations rated “B” are considered speculative and are subject to high credit risk.

“Caa” – Obligations rated “Caa” are judged to be speculative of poor standing and are subject to very high credit risk.

“Ca” – Obligations rated “Ca” are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

“C” – Obligations rated “C” are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Note: Moody’s appends numerical modifiers 1, 2, and 3 to each generic rating classification from “Aa” through “Caa.” The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

The following summarizes long-term ratings used by *Fitch*:

“AAA” – Securities considered to be of the highest credit quality. “AAA” ratings denote the lowest expectation of credit risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

“AA” – Securities considered to be of very high credit quality. “AA” ratings denote expectations of very low credit risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

“A” – Securities considered to be of high credit quality. “A” ratings denote expectations of low credit risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

“BBB” – Securities considered to be of good credit quality. “BBB” ratings indicate that expectations of credit risk are currently low. The capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity.

“BB” – Securities considered to be speculative. “BB” ratings indicate an elevated vulnerability to credit risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial alternatives may be available to allow financial commitments to be met.

“B” – Securities considered to be highly speculative. “B” ratings indicate that material credit risk is present.

“CCC” – A “CCC” rating indicates that substantial credit risk is present.

“CC” – A “CC” rating indicates very high levels of credit risk.

“C” – A “C” rating indicates exceptionally high levels of credit risk.

Defaulted obligations typically are not assigned “RD” or “D” ratings but are instead rated in the “B” to “C” rating categories, depending on their recovery prospects and other relevant characteristics. Fitch believes that this approach better aligns obligations that have comparable overall expected loss but varying vulnerability to default and loss.

Plus (+) or minus (-) may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the “AAA” category or to categories below “CCC”.

“NR” – Denotes that Fitch does not publicly rate the associated issue or issuer.

“WD” – Indicates that the rating has been withdrawn and is no longer maintained by Fitch.

The *DBRS* long-term rating scale provides an opinion on the risk of default. That is, the risk that an issuer will fail to satisfy its financial obligations in accordance with the terms under which an obligation has been issued. Ratings are based on quantitative and qualitative considerations relevant to the issuer, and the relative ranking of claims. All rating categories other than “AAA” and “D” also

contain subcategories “(high)” and “(low)”. The absence of either a “(high)” or “(low)” designation indicates the rating is in the middle of the category. The following summarizes the ratings used by DBRS for long-term debt:

“AAA” – Long-term debt rated “AAA” is of the **highest credit quality. The capacity for the payment of financial obligations is exceptionally high and unlikely to be adversely affected by future events.**

“AA” – Long-term debt rated “AA” is of **superior credit quality. The capacity for the payment of financial obligations is considered high. Credit quality differs from “AAA” only to a small degree. Unlikely to be significantly vulnerable to future events.**

“A” – Long-term debt rated “A” is of **good credit quality.** The capacity for the payment of financial obligations is substantial, but of lesser credit quality than “AA.” May be vulnerable to future events, but qualifying negative factors are considered manageable.

“BBB” – Long-term debt rated “BBB” is of **adequate credit quality. The capacity for the payment of financial obligations is considered acceptable. May be vulnerable to future events.**

“BB” – Long-term debt rated “BB” is of **speculative, non-investment grade credit quality. The capacity for the payment of financial obligations is uncertain. Vulnerable to future events.**

“B” – Long-term debt rated “B” is of **highly speculative credit quality. There is a high level of uncertainty as to the capacity to meet financial obligations.**

“CCC”, “CC” and “C” – Long-term debt rated in any of these categories is of **very highly speculative credit quality. In danger of defaulting on financial obligations.** There is little difference between these three categories, although “CC” and “C” ratings are normally applied to obligations that are seen as highly likely to default, or subordinated to obligations rated in the “CCC” to “B” range. Obligations in respect of which default has not technically taken place but is considered inevitable may be rated in the “C” category.

“D” – A security rated “D” is assigned when the issuer has filed under any applicable bankruptcy, insolvency or winding up statute or there is a failure to satisfy an obligation after the exhaustion of grace periods, a downgrade to “D” may occur. DBRS may also use “SD” (Selective Default) in cases where only some securities are impacted, such as the case of a “distressed exchange”.

Municipal Note Ratings

An **S&P Global Ratings** U.S. municipal note rating reflects S&P Global Ratings’ opinion about the liquidity factors and market access risks unique to the notes. Notes due in three years or less will likely receive a note rating. Notes with an original maturity of more than three years will most likely receive a long-term debt rating. In determining which type of rating, if any, to assign, S&P Global Ratings’ analysis will review the following considerations:

- Amortization schedule - the larger the final maturity relative to other maturities, the more likely it will be treated as a note; and
- Source of payment - the more dependent the issue is on the market for its refinancing, the more likely it will be treated as a note.

Note rating symbols are as follows:

“SP-1” – A municipal note rated “SP-1” exhibits a strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

“SP-2” – A municipal note rated “SP-2” exhibits a satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

“SP-3” – A municipal note rated “SP-3” exhibits a speculative capacity to pay principal and interest.

Moody’s uses the Municipal Investment Grade (“MIG”) scale to rate U.S. municipal bond anticipation notes of up to three years maturity. Municipal notes rated on the MIG scale may be secured by either pledged revenues or proceeds of a take-out financing received prior to note maturity. MIG ratings expire at the maturity of the obligation, and the issuer’s long-term rating is only one consideration in assigning the MIG rating. MIG ratings are divided into three levels – “MIG-1” through “MIG-3” – while speculative grade short-term obligations are designated “SG”. The following summarizes the ratings used by *Moody’s* for these short-term obligations:

“MIG-1” – This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

“MIG-2” – This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

“MIG-3” – This designation denotes acceptable credit quality. Liquidity and cash-flow protection may be narrow, and market access for refinancing is likely to be less well-established.

“SG” – This designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

In the case of variable rate demand obligations (“VRDOs”), a two-component rating is assigned; a long- or short-term debt rating and a demand obligation rating. The first element represents *Moody’s* evaluation of risk associated with scheduled principal and interest payments. The second element represents *Moody’s* evaluation of risk associated with the ability to receive purchase price upon demand (“demand feature”). The second element uses a rating from a variation of the MIG scale called the Variable Municipal Investment Grade (“VMIG”) scale. The rating transitions on the VMIG scale differ from those on the Prime scale to reflect the risk that external liquidity support generally will terminate if the issuer’s long-term rating drops below investment grade.

“VMIG-1” – This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

“VMIG-2” – This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

“VMIG-3” – This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

“SG” – This designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.

“NR” – Is assigned to an unrated obligation.

Fitch uses the same ratings for municipal securities as described above for other short-term credit ratings.

About Credit Ratings

An *S&P Global Ratings* issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation, a specific class of financial obligations, or a specific financial program (including ratings on medium-term note programs and commercial paper programs). It takes into consideration the creditworthiness of guarantors, insurers, or other forms of credit enhancement on the obligation and takes into account the currency in which the obligation is denominated. The opinion reflects

S&P Global Ratings' view of the obligor's capacity and willingness to meet its financial commitments as they come due, and this opinion may assess terms, such as collateral security and subordination, which could affect ultimate payment in the event of default.

Moody's credit ratings must be construed solely as statements of opinion and not statements of fact or recommendations to purchase, sell or hold any securities. Ratings assigned on **Moody's** global long-term and short-term rating scales are forward-looking opinions of the relative credit risks of financial obligations issued by non-financial corporates, financial institutions, structured finance vehicles, project finance vehicles, and public sector entities.

Fitch's credit ratings relating to issuers are an opinion on the relative ability of an entity to meet financial commitments, such as interest, preferred dividends, repayment of principal, insurance claims or counterparty obligations. Fitch credit ratings are used by investors as indications of the likelihood of receiving the money owed to them in accordance with the terms on which they invested. Fitch's credit ratings cover the global spectrum of corporate, sovereign financial, bank, insurance and public finance entities (including supranational and sub-national entities) and the securities or other obligations they issue, as well as structured finance securities backed by receivables or other financial assets.

Credit ratings provided by **DBRS** are forward-looking opinions about credit risk which reflect the creditworthiness of an issuer, rated entity, and/or security. Credit ratings are not statements of fact. While historical statistics and performance can be important considerations, credit ratings are not based solely on such; they include subjective considerations and involve expectations for future performance that cannot be guaranteed. To the extent that future events and economic conditions do not match expectations, credit ratings assigned to issuers and/or securities can change. Credit ratings are also based on approved and applicable methodologies, models and criteria ("Methodologies"), which are periodically updated and when material changes are deemed necessary, this may also lead to rating changes.

Credit ratings typically provide an opinion on the risk that investors may not be repaid in accordance with the terms under which the obligation was issued. In some cases, credit ratings may also include consideration for the relative ranking of claims and recovery, should default occur. Credit ratings are meant to provide opinions on relative measures of risk and are not based on expectations of any specific default probability, nor are they meant to predict such.

The data and information on which DBRS bases its opinions is not audited or verified by DBRS, although DBRS conducts a reasonableness review of information received and relied upon in accordance with its Methodologies and policies.

DBRS uses rating symbols as a concise method of expressing its opinion to the market but there are a limited number of rating categories for the possible slight risk differentials that exist across the rating spectrum and DBRS does not assert that credit ratings in the same category are of "exactly" the same quality.
